MESSAGE FROM OUR EXECUTIVE DIRECTOR

The year 2019 was in many aspects a year of change. It marked the near end of two decades of USAID TB Flagship funding and the preparations for a new KNCV Tuberculosis Foundation (KNCV) organization that is fit for the future. A future with the same mission, the same commitment, but a new strategy that recognizes the changing needs of TB patients, countries and TB health care providers during the elimination phase of the disease.

Hence, in 2019 we focused on a responsible restructuring of our organization in light of the lower funding level for 2020 onwards and the design of a new KNCV Strategic Plan 2020-2025. This came with the closure of several KNCV offices and the departure of many valued KNCV staff, who have worked so hard to make the USAID-funded Challenge TB (CTB) project a huge success. I take the opportunity here to thank all of them for their enthusiasm, commitment and professional attitude during the close-out phase of CTB! Our strategy to start diversifying funding sources over the past years was successful and resulted in retention of our technical staff members, and thus our technical assistance and research capacity.

The development of the new KNCV Strategic Plan 2020-2025 was informed by the global END TB Strategy; a comprehensive stakeholder analysis; donor strategies; and, most importantly, our organization’s comparative advantages to support countries in ending TB as a public health threat. KNCV is still the largest multidisciplinary NGO dedicated to TB worldwide!

The new KNCV strategy stresses the need for the introduction and evaluation of new tools and interventions to curb the TB epidemic. For the first time in 50 years there is an impressive pipeline of diagnostics, drugs, biomarkers, digital health solutions and even some vaccine candidates.

KNCV is in the perfect position to link the research & development pipeline with the responsible introduction and evaluation of these innovative tools at country-level. The latter involves technical assistance, evidence generation, training, policy...
development, advocacy, national strategic planning, and, last but not least, health systems strengthening and stigma reduction to support absorption and scale-up of innovations.

The year 2019 was in many ways a challenging year for the whole organization. But it also marks the shift to an exciting new role in the coming decade. Indeed, we are fit to fulfill our mission and contribute to the global target to End TB.

No doubt COVID-19 will affect health services worldwide, likely also negatively affecting services for TB patients in the short term. KNCV plans to mitigate against impact on TB services by contributing to Corona measures through sharing its expertise in areas such as infection control, contact investigation, laboratory capacity building, distance training, mobile and digital technologies, screening and surveillance. In the long term, health systems strengthening under Corona funding may benefit health systems and thus TB control and illustrate how TB program expertise and experience can be used in a broader health systems emergency response.

**RISK MANAGEMENT**

We acknowledge the importance of risk management systems and internal controls. Our work in countries that often have a higher risk profile than the Netherlands requires robust mechanisms to prevent, monitor and mitigate potential risks as much as possible. A description of KNCV’s risk assessment and mitigating actions can be found in the Governance and organizational report.

As explained in the ‘Subsequent events section’ in the financial statements, the COVID-19 outbreak and resulting measures taken by various governments to contain the virus have affected our project implementation during the first four months of 2020. We have taken a number of measures to monitor and prevent the effects of the COVID-19 virus such as safety and health measures for our staff (like social distancing and working from home). In addition to these already known effects, the macroeconomic uncertainty causes disruption to economic activity and it is unknown what the longer term impact on our business may be. At this stage, the impact on our business and results is limited. We will continue to follow the various national institutes policies and advice and in parallel will do our utmost to continue our operations in the best and safest way possible without jeopardizing the health of our people. The scale and duration of this pandemic remain uncertain and might impact our future income level. The main risks that result from the current uncertain situation regarding COVID-19 are:

- **Income:** It is clear that many planned activities are delayed due to travel bans, lock downs in a number of countries and a period of immense pressure that COVID-19 interventions will put on countries health care systems. This will affect project implementation. Mitigating actions are being taken to reprogram funds and replace activities that require physical meetings by activities that can be done remotely. This is all done in close coordination and communication with donors and National TB Programs.

- **Financing and liquidity:** Possible effects on donor funding streams are being managed in coordination and communication with the donors.

- **Internal controls:** Because of the nature of KNCV’s work most internal controls are based on a way of working that involves long distance communication. This was also the case before the COVID-19 outbreak. In-country offices where electronic banking was not yet installed effort are focused on getting that implemented.

- **Government assistance:** We are currently investigating possible relevant regulations for such government assistance in the countries in which we operate. There is no immediate need to apply. The details of available arrangements and the period through which they remain available are unknown. Going concern: whilst uncertain, we do not believe, however, that the impact of the COVID-19 virus would have a material adverse effect on our financial condition or liquidity that cannot be covered by our continuity reserve and project reserves.
“Our strategy to start diversifying funding sources over the past years was successful”

Mustapha Gidado (centre), Acting Executive Director of KNCV per 1 May 2020, together with Muhammad Yunus (left) who was awarded the Nobel Peace Prize for founding the Grameen Bank and pioneering the concepts of microcredit and microfinance and Mirella Visser (right), Chair of the Board of Trustees of KNCV.

KNCV IN KEY FIGURES IN 2019

- Income from lotteries: € 1,381,209
- Income from private fundraising: € 717,189
- 337 members of staff worldwide
- 15,668 private donors
- 1.2% of income spent on fundraising
- 1.8% of expenses spent on administration and control
- Income from government grants: € 57,396,652
- 97.0% spent on mission related goals
MESSAGE OF THE TECHNICAL DIRECTOR

We look back on a year full of change, in the wider TB world as well as within the Technical Division. In addition to the political commitment generated the year before, in 2019 scientific findings brought hope to the world that prevention of TB may come within reach, with steps made in vaccine development and access to new preventive treatment for LTBI (3HP).

Over 2019 the consultants in the technical division started to support countries on planning and introduction of this new LTBI treatment, building on experience from the Netherlands and other countries. A new, much shorter treatment regimen for drug-resistant TB was approved, first by the US Food and Drug Administration, followed by endorsement by WHO, an important step in the fight against severe forms of drug-resistant TB.

In 2019 our consultants worked with ten countries to prepare and develop resources for early implementation of this regimen and to understand and mitigate possible barriers for introduction, in partnership with its private donors and the TB Alliance. With WHO and other partners KNCV worked on the evaluation of novel diagnostics and continued work on the development of the stool test for diagnosis of TB in children, expecting to be able to fully operationalize the test in 2020.

In Indonesia the Yayasan KNCV Indonesia successfully brought the SITRUST laboratory sample transportation system to scale and collaborated with KNCV to start its implementation in Ethiopia and other countries. After development of the stigma measurement tools in 2018, this year we contributed to the development of a global toolset, giving TB stigma work a broader implementation base, a great step forward.

The DGIS-supported stigma project in Kazakhstan resulted in considerable interest with NGOs and the NTP alike in and is now taken up for further development through mainstream funding. In the Philippines the local partner of the DGIS-funded Building Models for the Future project succeeded to dramatically increase the screening and diagnosis of TB among vulnerable young men in Manila, a model with potential for further dissemination.

Building on the KNCV work with TB REACH and the Bill and Melinda Gates Foundation grants on digital adherence tools, the growing global momentum to implement digital treatment adherence support tools led to the launch of the Unitaid-funded ASCENT project, a partnership led by KNCV; this project is designed to implement and evaluate novel digital adherence technologies for all types of TB, to inform effective scale-up of their use in countries globally.

A systematic approach to data driven planning of country-level TB elimination efforts was developed through a global collaboration, importantly with buy-in from WHO and the Global Fund, which agreed to allow a special, simplified application process “Tailored to prioritized NSP”. The Gates Foundation, driving this initiative, partnered with KNCV to led the implementation of this People-Centered Framework approach for development of National Strategic
Plans, currently in ten countries. This is a great opportunity to build on KNCV’s earlier and ongoing work in prevalence- and drug resistance surveys and in systems building, to ensure country strategic plans incorporate the most effective mix of (existing and new) approaches. Modeling is used to support prioritization of interventions and investment.

System building continued throughout the period of the Challenge TB project; it is noteworthy that in Indonesia the Yayasan KNCV Indonesia successfully continued implementation of district PPM under Global Fund Catalytic funding and is carrying the KNCV legacy forward, while developing new innovations and funding sources. With the WHO grant on Development of a comprehensive digital training packages KNCV is using its vast experience in capacity building and digital solutions to assist WHO in development of a comprehensive, global digital learning platform for the provision of certified training courses on the End TB Strategy components.

In the Netherlands KNCV continued its role as center of expertise, in policy development, quality promotion, capacity building and patient support and advocacy for investment in TB elimination. With ZonMW support KNCV is leading the development of a new LTBI treatment guideline. In 2019 the global AMR conference was hosted in the Netherlands and KNCV actively engaged in the dialogue; based on its experience with designing and supporting countries in their fight against drug resistant TB, KNCV emphasized the need for awareness raising and stewardship, in addition to research and development. Importantly 2019 was the last year of the Challenge TB Project; its successful completion was celebrated at the Challenge TB Symposium during the Union World Conference in Hyderabad in November. During this last year gains were made in consolidation and scale-up of successful interventions, especially to find the missing TB patients, the use of new drugs and shorter MDR-TB regimens, laboratory connectivity and childhood TB.

“In 2019 scientific findings brought hope to the world that prevention of TB may come within reach”

Dr. Agnes Gebhard, Technical Director of KNCV Tuberculosis Foundation
TEARING DOWN BARRIERS TO ACCESS TB PREVENTIVE TREATMENT

3HP: a game-changer for TB prevention

Treatment of latent TB infection (LTBI) is a critical intervention in the fight against TB. In 2019, KNCV enabled expanding affordable access to a new type of LTBI treatment that will make it easier for individuals and communities who are at risk for TB to protect themselves from developing active TB disease.

This new type of treatment has the potential to transform the delivery of TB prevention, when combined with support for programs and people with LTBI. It involves taking two anti-TB medicines, isoniazid (H) and rifapentine (P) together at high dose, once a week for three months, in a regimen known as ‘3HP’. Because 3HP is shorter and requires fewer doses than existing treatment regimens, it is easier to complete a treatment course, therefore making it more effective than other options.

The health system will be saving costs compared to the current costs of treatment and by the prevention of future cases. Due to a number of barriers, this evidence did not immediately translate into access for eligible people due to barriers in political commitment, pricing and strategies and tools for implementation. Since 2017, KNCV has worked with the IMPAACT4TB consortium to address these access problems.

International guidance and political commitment

One of the initial successes was achieved when 3HP was included in WHO guidelines for the treatment of LTBI in 2018, which set a platform for subsequent work in individual countries. This coincided with agreement on ambitious global targets for TB prevention at the UN High Level Meeting on Tuberculosis: 30 million people should be treated for LTBI by 2022.

National partners come on board

KNCV is working directly with national partners in Ethiopia, Indonesia, Malawi and Tanzania to overcome access barriers, meet the ambitious targets, and reduce the impact of TB. In each of these countries, KNCV has successfully supported health policy and decision-making processes that led to the inclusion of 3HP in national guidelines in 2019. Although the health system will be saving costs compared to the current costs of treatment and by the prevention of future cases. Varell from Indonesia is recovering from his treatment received during the KNCV-led Challenge TB-project.
inclusion in guidelines does not mandate access, it is an essential enabler: once 3HP is part of the guidelines, it can move from piloting towards national scale-up. Decision-makers in these countries should be congratulated for their enthusiasm to adopt proven innovations to improve TB care, and KNCV is proud to partner in this successful health policy initiative.

Optimization of implementation strategies
In two countries KNCV has developed collaboration to implement studies to contribute to the global knowledge about the best way to support patients to access and complete treatment for LTBI. In Malawi, KNCV is collaborating with Johns Hopkins University and national TB and HIV programs to find out whether improving the workflow in HIV clinics will increase access to TB prevention for people living with HIV. In Ethiopia, a similar partnership is set up to investigate the best way to deliver comprehensive TB prevention at the community level – including identification of those at risk, screening and treatment initiation if necessary.

The price is right
Another barrier was the price. Rifapentine was discovered in the 1960s but has been off patent for many years. But without a large volume demand for the medicine, only one manufacturer was producing it and prices were high. Once the 3HP regimen was proven to be effective for treating LTBI, national governments still could not consider placing large orders at the prevailing price, and the manufacturer would not reduce the price without having orders ensuring economies of scale.

In October 2019, a landmark price agreement was announced that would ensure an accessible price for rifapentine. This agreement was between the producer and partners including Unitaid, funder of the IMPAACT4TB consortium, and based on the anticipated demand for 3HP facilitated by the work of IMPAACT4TB. This price reduction, from USD45 to USD15 per patient, represents a major achievement for IMPAACT4TB and KNCV. Having achieved policy change and willingness to scale-up the use of 3HP in countries with high TB burden and large eligible populations, such as in the countries supported by KNCV, IMPAACT4TB was able to demonstrate that a market existed to justify a lower price and expanded production of rifapentine.

Just the start for expanded access to TB prevention
What is next for scale-up of LTBI treatment using 3HP? Starting from early 2020, KNCV will support the implementation of 3HP at large scale in supported countries. Following this, in mid-2020, the IMPAACT4TB consortium expects that the successes already achieved in terms of market-making and health policy development will result in rifapentine products being produced by generic manufacturers. This will further expand production capacity for 3HP, as well as provide a choice of products for countries to procure for an affordable price.

Starting from early 2020, KNCV will support the implementation of 3HP at large scale

KNCV supports change management
The landscape of treatment options for patients with drug-resistant tuberculosis (DR-TB) is evolving rapidly, resulting in regular updates of the WHO recommendations and guidelines in this field. With funding from Challenge TB, the USAID “flagship” project, KNCV and partners have supported 14 countries to introduce the WHO recommended shorter (nine months instead of 20 months duration) treatment regimen for patients with multidrug-resistant tuberculosis (MDR-TB) and to introduce treatments with new drugs for people with extensively drug-resistant TB (XDR-TB); while the treatment for XDR-TB patients is now more effective, it still requires patients to take approximately 14,000 pills over a period of 20 months and comes with significant toxicities. At the same time KNCV helped countries build the platforms and human resources to rapidly adopt new treatment options when these would become available.

In 2018 KNCV was approached by the TB Alliance (TBA), a not-for-profit organization working on the development of new treatment regimens for TB and DR-TB. A promising new six month treatment regimen for seriously ill DR-TB patients, developed by the TBA, which was near to the end of its development phase (Nix trial) was discussed. The regimen consists of two known drugs (bedaquiline and linezolid) and one new drug (pretomanid). Apart from the increased effectiveness and shorter treatment duration, the daily pill burden of this regimen is only 3-7 pills, resulting in less than 750 pills for a full course of treatment.

From research to implementation: understanding country preparedness for novel regimen introduction
From end 2018 till August 2019 KNCV assessed the acceptability and likeliness of implementation as well as the anticipated incremental cost of this so called BPaL regimen in three countries: Nigeria, Kyrgyzstan and Indonesia, representing three different geographies and global epidemiological realities.

Focus group discussions and individual interviews were conducted by trained local (KNCV) staff among nearly 200 stakeholders from three broad categories: caregivers, programmatic stakeholders and laboratory stakeholders, also including patient groups. After an introduction to the novel regimen and a discussion on their current practices, these stakeholders were asked to assess different aspects of benefits and challenges with regards to the
current 18 – 20 month DR-TB treatment regimen and the novel BPaL regimen. In addition they were also asked to identify the anticipated practical requirements for the implementation of BPaL. After the group discussions and interviews, which were recorded for qualitative analysis, the participants were asked to score the acceptability of both the current and novel regimen on different aspects; they were also requested to score the likeliness of implementation of the novel regimen in their country.

The results overall showed a much higher acceptability of the BPaL regimen on most assessed aspects compared to the current standard. Especially the lower pill burden, the lack of injectables and the shorter duration were expected to improve the quality of life of patients and reduce the workload of health workers, reducing pressure on the health system. The main challenge for introduction of the novel regimen was the fact that a new drug was involved, initially requiring special regulations to apply regarding drug safety monitoring.

Although there were differences in the acceptability of the BPaL regimen on different aspects between the countries due to specific health system characteristics, in all three countries the vast majority of the stakeholders, after discussing the feasibility and challenges, considered implementation likely.

In addition KNCV was requested to conduct a study of the costs, from a health service perspective, of using BPaL to treat XDR-TB patients compared to using conventional treatment regimens in Indonesia, Kyrgyzstan, and Nigeria. This showed significant savings of the absolute costs, including diagnosis, treatment and treatment monitoring.

Regulatory approval brings better tolerable, effective treatment to patients

Based on the Nix trial results, in August 2019 the BPaL regimen was approved by the United States Food & Drug Administration (FDA); the TBA presented the results of 107 assessable patients (total enrollment 109) at the 50th Union World Conference on Lung Health in October 2019, with 89% favorable outcome (culture negative) after 6 months post-treatment follow-up.

The results of the assessments of acceptability, likeliness of implementation and costing of the BPaL regimen were reported to WHO, to inform the guideline development process. Publications in scientific journals are in preparation.

In December 2019 WHO published a short communication on the new DR-TB treatment guidelines, recommending fully oral treatment regimens of nine month duration for patients with MDR-TB with better safety profiles, as well as the use of the BPaL regimen for specific patient groups (mainly XDR-TB patients), under operational research conditions.

The methods used by KNCV in these studies have yielded useful information to prepare the introduction of the BPaL regimen and other future regimens in different country settings emphasizing that national introduction plans should not only focus on the regimen change but use this as an opportunity to strengthen all other aspects concerning the programmatic management of DR-TB.
THE PEOPLE-CENTERED FRAMEWORK FOR TB PROGRAMMING

The fight against tuberculosis (TB) is at a defining moment in its history. Rapid and significant advances in medical technology, development of new and repurposed drugs and a concerted global research effort means that we have more knowledge and tools to adequately deal with TB than ever before.

Global political will is at its highest since countries at the 2018 United Nations High Level Meeting (UNHLM) have affirmed their political will towards the ambitious third Sustainable Development Goal (SDG) and the global End TB strategy. The 2018 Lancet Commission on Tuberculosis emphasized the need to “explore how countries can improve outcomes and optimize use of available resources by realigning them to ensure that all tuberculosis care is people-centered and by prioritizing interventions that increase efficiencies in the delivery of tuberculosis services.” However, Global TB surveillance data suggests that targets for TB control set by the End TB strategy and the SDGs are steadily moving out of reach, as national program gains are progressing much slower than necessary. The gap between estimated numbers of TB patients and those ultimately found and provided with adequate care is slowly decreasing, but it is not sufficient to get on top of the epidemic, end transmission and eliminate unnecessary suffering. Since June 2019, KNCD, funded by the Bill & Melinda Gates Foundation, has been working in close collaboration with the World Health Organization (WHO) and Linksbridge SPC on refining and operationalizing The People-Centered Framework for TB programming (PCF), to provide countries with the necessary tools and approaches to optimize their National Strategic Plans. Where traditional program planning mainly focused on the epidemiological situation, the PCF approach is adding relevant health system capacity and “people data” (e.g. preferences in health seeking behavior, socio-economic risk factors, cultural barriers, etc.) and examines these along the patient care continuum, identifying gaps and opportunities. The aim is to optimize the program through realigning and prioritizing intervention packages that increase efficiencies in the delivery of people-centered TB services, closer to where they should be delivered to meet patient preferences. The PCF approach is also promoting an extended stakeholder engagement in the planning and implementation process, (including affected populations, civil society, private providers, other non-health sectors) through a comprehensive partnership framework aligned to each stakeholder’s comparative advantage.

The PCF approach helps countries to develop a fully prioritized and budgeted TB National Strategic Plan (NSP), which is people-centered, optimized, responsive, resilient and evidence-based, and in sync with other national planning timelines. The resulting NSPs enable countries to use the generated evidence and evidence-based strategies to negotiate harmonized and optimized engagement and resource allocations from domestic and external stakeholders alike. These NSPs are the basis of a robust national response towards ending TB in line with the End TB Strategy and overall national moves towards Universal Health Coverage (UHC).

As a result of the consultative and evidence-based nature of the approach, engaging all relevant stakeholders along all steps of the process, we witness greater consensus on findings, analysis and interpretation of the situation analysis and the resulting jointly developed course of action. This leads to greater country capacity, ownership and commitment among all stakeholders to invest and engage in a cohesive and optimized manner. Furthermore, it encourages better collaboration of all relevant stakeholders, by building on their respective comparative advantages and skills in both, planning, implementation and evaluation of the program.

In 2019, KNCD has developed a comprehensive training and support package and assisted nine early adopter countries in the implementation of the PCF approach for NSP development. The approach has furthermore been successfully used by countries for NSP validation, grant reprogramming, Technical Assistance mapping and focused intervention planning. We are currently developing and refining analytic tools and aids, to facilitate the ease of application allow for their adaptation for continuous monitoring during actual program implementation. The PCF approach has already been adopted as the accepted best practice approach for TB programming (with acknowledged applicability of the same principles and methodology for other programs). KNCD is currently working with the WHO and relevant partners to align established standardized program review and evaluation formats and guidelines like the Epidemiological Review and Joint Program Monitoring/Review to the PCF approach.
PREVALENCE SURVEY REPORT

It is not exactly known how many persons get TB every year, as not all persons with TB develop or experience symptoms, some do not seek care for a variety of reasons, and others are not reported when they actually seek care and are diagnosed. To get an idea of the real burden of TB disease in a country, and to learn more about TB patients who had not yet been identified by the health system, prevalence surveys are useful studies.

These surveys take a random sample of the population in which the number of people with TB is measured using sensitive screening and diagnostic techniques. If a prevalence survey is repeated after some time, by comparing the burden during the first and the next survey, one can estimate the trend (i.e. less or more TB than in the previous survey(s)). KNCV consultants have been involved in many prevalence surveys across the world. An example will be given of the prevalence survey in Vietnam, supported by KNCV.

The second national tuberculosis prevalence survey in Vietnam

The Vietnam National Tuberculosis Program (NTP) with technical support from KNCV started in October 2018 its second national TB prevalence survey. The survey aimed at broadly evaluating the effect of interventions to reduce the burden of TB disease in Vietnam since the first national TB survey conducted in 2006-2007.

The second national TB prevalence survey continued for five months and included nearly 90,000 adult people across the country. All participants were screened using a short TB symptom screening questionnaire and a chest X-ray. Participants presenting with any of cough of two-weeks duration or more, TB treatment in the two years before the survey, or chest X-ray findings suggesting TB were asked to give two sputum samples. In sputum of most patients with lung TB, TB bacteria can be detected using sensitive tests. All participants in whose sputum TB was detected were reviewed by an expert panel, who decided who currently had TB disease and who did not have TB disease.

All data collected were directly entered into a database, which was synchronized with a central server on a daily basis. The survey used modern and very sensitive laboratory techniques to detect TB. Also, we conducted data analysis according to the state-of-the-art analysis techniques.

This survey showed that the TB burden in Vietnam remains high, with 322 TB patients per 100,000 adults (uncertainty interval, 260-399 per 100,000 adults). It also showed that half of the TB patients did not have the standard symptoms that are commonly used to identify patients for diagnostic testing; instead, they were identified because their chest X-ray showed some abnormality suggesting TB disease. This means that in the future the symptom screening questionnaire will be replaced by testing by X-ray and Xpert (also called the “Double X Strategy”). By adopting this strategy the program can find previously missed people with TB.

Last but not least, the survey allowed to strengthen the national research capacity in Vietnam. KNCV Tuberculosis Foundation experts, along with experts from WHO and US CDC conducted several monitoring missions and provided hands-on training on the survey field operations, data management, chest X-ray reading, laboratory standards, and procedures. One of the NTP staff members was enrolled in the Ph.D. program at The University of Amsterdam, Amsterdam Institute for Global Health and Development, and KNCV.
A FIVE-YEAR STRATEGIC PERIOD (2015-2019) REFLECTED

The three key strategic directions for KNCV during 2015-2019 included improving access to TB prevention and care for all forms of TB, evidence generation, and supporting systems for National TB Programs for an effective and efficient response to the TB epidemic. These strategic directions guided KNCV’s acquisition and implementation of projects.

KNCV, through several projects and especially with Challenge TB, worked in close collaboration with the Global Fund and other TB stakeholders at country-level to ensure access to quality TB services through data-driven planning, alignment of TB services with patient pathways and addressing key barriers to access like stigma and the catastrophic costs that can follow from being diagnosed with TB.

Evidence generation was mainstreamed as part of the project implementation, leading to documentation and publication of 196 manuscripts. Part of the evidence that was gathered, supported policy development at a global-level in the areas of the introduction of new drugs and regimens, laboratory strengthening, preventive treatment (3HP), and use of digital adherence technology. Lastly, KNCV developed tools to support National Tuberculosis Control Programs (NTPs) with the uptake of new technologies. Through technical assistance KNCV strengthened the capacity of NTPs and community based-organizations in different countries on quality implementation of TB services including advocacy.

Lessons learned within the past five years and observing the changes within the TB landscape and context (including the UNHLM targets, Universal Health Coverage, new drugs and regimens, laboratory technology, and role of digital technology) formed the basis for a new five-year strategic plan (2020-2025). This plan makes a strategic shift, the focus is on innovation, evidence generation, data-driven planning at national and sub-national levels, and strengthening systems for uptake of innovation and delivery of quality of care.

In the 2020-2025 strategic plan, KNCV will ensure that routine quality TB services are implemented by NTPs, a network of KNCV national NGO’s and national CBOs. KNCV will focus on capacity strengthening, the introduction of new innovations and medicines, and evidence generation.

New drugs and regimens, laboratory technology, and role of digital technology) formed the basis for a new five-year strategic plan.
For the past five years KNCV led and implemented the Challenge TB Project (CTB). By December 2019, 19 countries and two regional projects successfully closed-out programmatically and administratively. The remaining five countries and the CTB prevention project will close-out by March 2020 (when the overall project officially ends as well).

The CTB-supported countries jointly achieved the following results during the five-year project period:
- 7.3% reduction of the TB incidence rate above the global average of 6.3%  
- 85% treatment success rate with more than ten countries above 90%  
- 10.2 million people successfully treated  
- 275,000 people initiated on treatment for MDR-TB  
- Provision of ART for 86% of people infected with both TB and HIV

One of many successful interventions was the scale-up of GeneXpert in countries: in 2019, 4,561 GeneXpert machines were available in the CTB-supported countries, which led to the scale-up of testing of TB patients for resistant TB to 87% (2018). Another success story was the introduction of new drugs and regimens (NDRs) across 23 countries. The scale-up of GeneXpert and the introduction of NDRs was based on a package approach (a combination of standard guidelines, tools and activities supporting the introduction of new interventions), which made it easy to replicate the interventions across most of CTB-supported countries.

The success of CTB was linked to the coordination and collaboration with partners at all levels. Leveraging interventions implemented by the Global Fund and other USAID-supported mechanisms increased CTB’s impact. Implementation was done through national health systems and with local partners, as part of the countries’ journey to self-reliance.

An important focus of CTB was capacity building of NTPs and local organizations in order to prepare them to identify gaps, develop work plans, and implement and monitor interventions. The project signed 387 subawards with 163 different organizations, of which 152 were local. The subawards covered 10% of the total project budget. During the last few months many of the local organizations (in Burma, Democratic Republic of the Congo, Indonesia, Malawi and Nigeria) were able to successfully apply for new funding mechanisms. CTB had a successful and well attended close-out event at the Union World Conference in Hyderabad (India). The close-out event marked the end of 20 years of successful implementation of USAID-supported global flagship projects. Dr. Gidado, Project Director CTB, mentioned during the closing ceremony at the Union World Conference: “It was a complex but successful project. We saved lives and reduced suffering of millions.”

Paran Sarimita Winarni, a 37-year old TB survivor from Indonesia, mentioned during the close-out ceremony that the support from CTB Indonesia (with KNCV as lead partner) showed her that TB patients can take a meaningful part in the fight against TB. She was grateful that the project looked at the human beings behind the numbers.

Looking forward
During the first quarter of 2020 the Project Management Unit will support the close-out of the remaining five countries and the CTB prevention project. The team will also work on the finalization of the Global End of Project report as well as the financial and administrative close-out of the overall project.

Implementation of 20 years of USAID-funding has made KNCV stronger: as an organization we are able to support countries in a systematic way, and we can support the introduction of new tools and regimens based on systems which were built under CTB. As a result of this, we are a trusted partner of the NTPs, (inter)national partner organizations as well as donor organizations. Diversification of funding made it possible that KNCV currently has activities in many former CTB supported countries.
INTRODUCTION TO OUR PROJECTS WORLDWIDE

Throughout 2019, KNCV has been involved in the fight against TB in more than 25 countries. As a result of successful funding diversification, a diverse portfolio of different projects, funded by different funding streams, are being implemented by KNCV, often in collaboration with different local and international partners.

As the lead partner of CTB, we continued to provide quality technical assistance in 23 CTB countries through effective coordination of the consortium partners and direct involvement in innovative strategies like digital health, the introduction of MDR-TB medicines, and scaling-up advance laboratory services. Important focus in most CTB countries has been on the transitioning as the CTB activities have ended in most countries by the summer except for Zimbabwe, Ukraine, Afghanistan, Botswana and Nigeria as activities in these countries will be finalized in the first quarter of 2020.

During 2019 KNCV scaled-down the number and size of the country offices in line with the post CTB project portfolio and we maintain presence on the ground in seven countries by the end of the year. Besides that, KNCV continues to provide needs-based technical assistance to all relevant countries worldwide.

It has been a very dynamic year for our teams in the different countries as well as on a central level. The persistence and commitment to successfully complete activities, as well as the enthusiasm of all staff working on other ongoing and new projects has been heartwarming and key to the successful implementation of the different projects in the fight against TB.

In the following pages an overview of KNCV projects beyond CTB is presented, demonstrating a further diversification of funding sources shifting into prioritized innovation areas and building on our exiting in-country implementation capacity.

The underpinning strategy for KNCV success has been “work with and through the government” to ensure acceptability, sustainability, and scalable implementation.
KNCV CENTRAL OFFICE:
The Netherlands

KNCV OFFICES:
- Nigeria
- Ethiopia
- Kenya
- Tanzania
- Malawi
- Botswana
- Namibia
- Kazakhstan
- Kyrgyzstan
- Tajikistan
- Vietnam
- Philippines
- Indonesia

Countries where KNCV is also active:
- Ghana

- Swaziland
- South-Africa
- Ukraine
- Uzbekistan
- Afghanistan
- Myanmar
- Cambodia
KNCV experts work in projects in more than 25 countries worldwide to strengthen national TB programs and to drive innovations. We work through national and local health systems ensuring that interventions are aligned with a country’s TB National Strategic Plan and fully integrated into a country’s broader healthcare delivery system.

The ‘Treatment Adherence’ project, funded by the Bill & Melinda Gates Foundation supports selected countries to develop demonstration projects of either 9DOTS/MERMS or both. The project provides technical assistance to the selected projects to develop, implement and evaluate demonstration projects including addressing key questions with regard to feasibility and approaches to differentiated care; and share knowledge and results, including development of a standard implementation package to support national and global scale-up of adherence technologies.

KNCV conducted business development and local stakeholder engagement trips to Ethiopia, Tanzania, Nigeria, and the Philippines, gathering additional information and consulting with local partners in order to develop comprehensive TB REACH proposals. This funding from the Gates Foundation has been successful in increasing KNCV’s capacity to support digital health solutions and implement improved strategies around diagnostic connectivity and adherence technology.

In 2019, we continued providing technical assistance to the implementation of digital adherence technology (DAT) in Tanzania, Philippines and Ukraine. We supported the implementation of research on the effectiveness, feasibility, acceptability and accuracy of DAT in Tanzania and the Philippines.

Globally, we supported Stop TB Partnership and in standardizing DAT data collection and reporting within TB REACH Wave six grants. We developed and launched the DAT implementation package (www.adherence.tech), which is a tool to guide countries in introducing DATs in their health programs. Finally, we facilitated a symposium on the implementation of DAT during the Union World Conference 2019.

‘The Global Fund to fight AIDS, Tuberculosis and Malaria (GF)’ project seeks to address the key programmatic gaps, in particular of finding the ‘missing persons with TB’ and addressing other related health system challenges towards achieving greater impact.

The key strategic focus of the project is to:

a. Find the missing persons with TB
b. Address the huge gap in multidrug-resistant (MDR-) rifampicin-resistant (RR) TB detection and treatment in enrolment
c. Address the low TB service coverage by rapidly expanding TB services
d. Pursue an ambitious scale-up of TB services in the private-for-profit (PFP) facilities
e. Address the suboptimal access to and utilization of GeneXpert MTB/RIF services
f. Address issues of vulnerability by increasing efforts at case finding among key and vulnerable populations
g. Increase access to TB/HIV services
h. Address health system weaknesses and finance gaps that have contributed to the limited performance of the NTP to date.

In 2019 we supported the patent medicine vendors, community pharmacists and traditional birth attendants in showing an increase in referrals of presumptive TB patients. We also supported the private-for-profit sector in their diagnosis of presumptive TB patients. The project continued to support these facilities and groups with mentoring, supportive supervision and onsite data verification.
The Building Models for the Future project aims to improve TB and HIV prevention and care in line with the Global End TB Strategy, the Sustainable Development Goals (SDGs) and the Fast-Track Strategy to End AIDS. The project focuses on system-related barriers to quality of care in the non-governmental and private health care delivery sectors, and to remove human rights and gender-related access barriers to TB and HIV care and prevention. The aim is to ensure access to affordable quality care for vulnerable and marginalized key affected populations.

The BMF project was set to close in 2019. This has been a successful end-of-project year for the BMF project. The models developed in Kazakhstan, the Philippines, and Nigeria transitioned to each respective government. In all three countries we were able to support effective partnerships between the governments/public sector, private health care providers and key populations. The quality and accessibility of services in the non-public sector improved. In each country, the BMF partnership had a different focus.

In Kazakhstan, we created partnerships between private health facilities and local NGOs. The NGOs cater to a number of different patient support needs, e.g., legal and socio-psychological support. In the Philippines, networks of different private providers were established with faith-based, mall-based, hospitals and private clinics referring and supporting each other. In Nigeria, quality parameters and digital innovations have brought government stakeholders and private facilities closer together and form the basis for facility accreditation.

In August 2019, in “transition” workshops, the models were handed over to the respective governments. In the latter part of the project year, we conducted an internal evaluation of all three project pillars as well as the BMF partnership of KNCV, AFEW, PAI, and Hivos. Early learnings from the evaluation brought forth a need to address TB-related stigma in our project countries. In response to this, we piloted three stigma reduction tools to patients groups and healthcare workers, i.e., ‘TB Photovoice’, ‘From the Inside Out’ and the ‘Allies Approach’. This was concluded with a Stigma Reduction Symposium with ex-patients, healthcare workers telling their stories to a Dutch audience.

Latent TB infection (LTBI) occurs when a person is infected with Mycobacterium TB, but does not have active TB. Unlike active TB, LTBI is not contagious. Approximately 10% of people with LTBI will go on to develop active TB. This is particularly true in people with a suppressed immune system or advancing age. The identification and treatment of people with latent TB is therefore an important part of controlling TB.

The goal of the IMPAACT4TB (Increasing Market and Public health outcomes through scaling up Affordable Access models of short Course preventive therapy for TB) project is to reduce TB incidence and deaths among people living with HIV (PLHIV) (15-49 years) and child contacts through sustainable implementation of affordable, quality-assured 3HP.

3HP is a short-course regimen of isoniazid and rifapentine weekly for three months for treatment of LTBI. The outcomes of the project are to: increase the number of PLHIV and child contacts under the age of five years starting treatment with affordable, quality-assured 3HP, and contribute to revising WHO preventive therapy management guidelines based on evidence generated from this project.

During the last quarter of 2019, agreement was reached on the price of 3HP. The agreement brings a one-month supply of rifapentine tablets down from US$15 to US$5 per patient pack for the public sectors of high-burden TB countries. This agreement paved the way for countries to procure the drugs and ensure readiness for treatment of patients starting early 2020 with 3HP.
TREATS / EDCTP

The TREATS (Tuberculosis Reduction through Expanded Antiretroviral Treatment and Screening for Active TB) project is measuring the success of a ‘universal test and treat’ project called PopART in reducing the prevalence and incidence of TB in Zambia and South Africa. These findings will help to define new policies and approaches for tackling the TB-HIV epidemic. The project is conducted in 21 urban, high prevalence communities in South Africa and Zambia. The project consists of four linked studies that will provide evidence of the effect of the household-level combined HIV and TB prevention intervention on the burden of TB at population level.

The two main outputs are:
1. Provide definitive evidence of the effectiveness of scaled-up combination TB/HIV prevention interventions on TB;
2. Improve understanding of the best ways to measure the impact of public health interventions on TB burden.

KNCV has a leading role in the implementation of the Prevalence Survey. This survey targets to collect data on 56,000 participants over the project duration. The survey was launched end of February in Zambia and end of March in South Africa after successful completion of pilot studies in both countries and through testing of an innovative digital Data Management System. In the first communities in both countries a so-called intensive diagnostic phase was conducted to gain key insight in the optimal diagnostic algorithm for the survey using a combination of GeneXpert ULTRA and culture as diagnostic tests. Global discussion arose after recent national TB prevalence survey showed discordant results making interpretation of results and how to define what is a TB case challenging.

TREATS presented the key intensive diagnostic phase findings on GeneXpert ULTRA and culture results during a symposium at the Union World Conference, titled: “Lessons learnt from national TB prevalence surveys using culture and Xpert MTB/RIF: TB or not TB?” in October 2019. The findings were very well received and are an important contribution to the global discussion on how to optimize the conduct of TB prevalence surveys. Fieldwork will continue with an adjusted algorithm minimizing the use of culture. Field work is expected to be completed in Q3 of 2020.

Zambia, South Africa

PAVIA / EDCTP

PAVIA (PhArmaco Vigilance Africa) is an EDCTP-funded project led by Amsterdam Institute for Global Health and Development (AIGHD) with KNCV being one of the key partners. The primary focus of the project is developing local systems and improving safety of new drugs for treatment of multidrug resistant tuberculosis (MDR-TB). As a project implemented by a consortium of nine African and four European organizations, the project seeks to ensure local leadership in strengthening pharmacovigilance (PV) systems in Africa. The experience gained through this project will be used to strengthen the PV of drugs used for other diseases of public health importance.

KNCV leads the Monitoring and Evaluation component (Work Package 4) of the project. The objectives of Work Package 4 are three-fold:
- Analyze PV structures and processes at baseline to develop a country-specific roadmap
- Evaluate impact of the project on PV outputs, i.e. adverse event data generated and its impact on policy and practice
- Develop a blueprint to guide scale-up of PV in other African countries

Key results in the KNCV work package area of 2019 are:
- Baseline assessment was completed in all the four countries. Based on the baseline assessment reports, roadmaps which describe the national PV were finalized in all four countries, and final approvals are pending in Eswatini and Ethiopia.
- PAVIA symposium was organized at the 50th Union World Conference in India under the title: “Sustainable models for strengthening pharmacovigilance of TB medicines and diagnostics: global and regional perspectives and country examples.”
- A paper describing lessons learnt on pharmacovigilance (mainly including those from CTB) was published: Tiemersma et al., Eur Respir Rev 2019; 28: 180115. Integration of drug safety monitoring in tuberculosis programs: country experiences.
In Tanzania, the population of workers involved in the mining sector is a high-risk group for TB. This is especially true for individuals involved in small-scale (artisanal/informal) mining communities where persons are living in poorly ventilated, crowded mining camps, work underground in small, dusty spaces, and do not have access to the company-employed TB doctors typical in the large-scale mining industry. These small-scale miners are particularly mobile, as gold rushes are common, and miners move often between different mining camps. Furthermore, these mobile mining populations often lack the built-in community support associated with rooted family support systems. The TB REACH project in Tanzania introduces 99DOTS as a Digital Adherence Technology (DAT) in the gold mining Geita region in northwestern Tanzania to enable treatment and adherence support for miners with Drug Resistant Tuberculosis (DS-TB).

Since 2018, KNCV has rolled-out DAT demonstration projects in three countries – Philippines, Tanzania and Ukraine, funded by the Stop TB Partnership, TB REACH. The goal of these demonstration project is to assess the feasibility, acceptability by patients and health care providers, and the accuracy of digital adherence technologies. In addition, the project will assess the overall impact of DATs on treatment outcomes and general adherence behavior. As part of the project, KNCV will determine the necessary adaptations needed to make DATs suitable for a variety of contexts, including how to incorporate patient-centered mechanisms, and steps to scale-up and sustain these innovative approaches.

Project highlights
- Over 790 patients registered on the DAT platform
- Surveys from over 170 patients and health care workers on the acceptability and feasibility of DATs in Tanzania
- Patients empowered with insights into their treatment adherence to better support themselves
- Custom adaptations to the sleeves for usability in Tanzania that can be replicated across other products.

One of the main benefits of DATs is the availability of electronically compiled dosing histories which can be used to efficiently guide individualized patient centered care. To support the current DOT standard of care in Tanzania, which is (>90% of patients) self-administered home-based treatment, the adherence platform is customized to send SMS reminders to patients who have not taken their daily medication by 6pm. Where patients have missed two or three consecutive daily doses of medication, the DAT prioritizes these patients and sends an SMS reminder to the health care provider to call or visit these patients at home, to counsel and motivate patients to take their medication.

This technology driven intervention has empowered patients and supported health care workers to improve the current DS-TB regimen performance by closing gaps in treatment (half of the cascade of care). DATs can play an important role to reinforce patient medication adherence and facilitate monitoring and triage of patients by health systems, this can include customized motivational and educational messages based on patient dosing histories for patients who need more support.

The TB REACH projects on treatment adherence, funded by Stop TB Partnership aims to:
(i) Implement 99DOTS adherence technology through National TB Program (NTP) accredited service delivery and supply chains, and
(ii) Assess practicalities, scalability and impact on treatment outcomes of monitored self-administration and dose history informed differentiated care.

In 2019 we had the following successes:
- The treatment success rate was 79% (213/269) with 82 patients still undergoing treatment
- We secured buy-in of NTP (national, regional, local) and other stakeholders (e.g. WHO, private and public sectors)
- DAT is now included in the revised NTP Manual of Procedures
- We identified and proposed modifications needed in 99DOTS application and dashboard for enhancements in ASCENT
- Participatory localization/customization of DAT and establishment of differentiation pathway of care – by regional and local stakeholders.

Little boy with TB and his friend in front of the local pharmacy on the Philippines where KNCV works on the projects Building Models for the Future and TB REACH.
**TB REACH Nigeria /Stop TB Partnership**

The KNCV-led TB REACH project, “Scaling up Innovative Delivery of TB Care to Nomadic populations in northeastern Nigeria”, funded by the Stop TB Partnership, was coordinated on the ground by two community-based organizations (CBOs) active in three states in northeastern Nigeria (Adamawa, Gombe and Taraba). KNCV provided technical and fiduciary guidance to the CBOs (Janna Health Foundation and SUFABEL Community Development Initiative).

The purpose of this project was to expand TB care in an innovative and collaborative manner through involvement of nomadic leadership to ensure that patients and communities have ownership over the design, implementation and sustainability of the project, while retaining an evidence-based approach. The objective was also to stimulate policy change on the allocation of scarce resources to improve TB case detection.

The project was launched at the end of 2018. Community leaders, both male and female, were engaged as TB advocates. A cadre of volunteers were recruited, and many were provided with motorcycles to reach rural areas for screening and to transport sputum specimens to TB laboratories. In 2019, nearly a half million nomads (men, women and children) were actively engaged for TB screening.

In 2019, nearly 3,000 confirmed TB cases were diagnosed and put on appropriate treatment as a result of this project. In addition, as nomads are at greater risk for zoonotic tuberculosis due to drinking unpasteurized milk and exposure to animals with bovine tuberculosis, an operational research project was initiated by KNCV in collaboration with the CBOs and the National TB & Leprosy Program, Nigeria. This study will help to understand the magnitude of the burden of zoonotic TB among the nomadic population and potential measures to prevent it.

**Development of a comprehensive digital training package**

This project facilitates the development of a comprehensive, global digital learning platform for the provision of certified TB related training courses on the End TB Strategy for strategically targeted audiences (e.g. TB policy makers, consultants of technical agencies, TB program managers and district TB officers, among others).

In 2019, an inventory/mapping of partners engaged in TB related training activities was undertaken along with a critical assessment was done of existing TB-related training curricula, pedagogical methods and tools used. This was complemented by an assessment of available digital global training platforms.

---

**TB REACH Ethiopia /Stop TB Partnership**

The overall goal of the TB REACH ‘Improving TB Preventive Treatment among Under-five Children through Engagement of Women’s Indigenous Associations in Ethiopia project is to strengthen Tuberculosis Preventive Treatment (TPT) among under-five children through a women-centered approach.

Our objectives are: (1) To increase TPT initiation rates from 53% to 98% among under-five children in the project zones; (2) To increase TPT completion rates by 50% from baseline. Our target is to screen 4833 contacts and treat 805 under-five children from Yeka sub-city of Addis Ababa and Gamo Goffa zone from SNNPR.

KNCV will deploy a women-led, innovative community-based treatment support strategy through Iddirs (membership-based indigenous local associations of people who have voluntarily entered into an agreement to help each other) to improve initiation and completion rates of TPT among under-fives in two zones of Ethiopia. We will partner with and build the capacity of a local NGO, Love in Action Ethiopia (LIAE), with previous experience in engaging Iddins in HIV care and other social services. We will employ a rigorous monitoring and evaluation system using control zones to measure the effectiveness of the interventions for future scale up. Empowering women and girls will be an integral component of this project.
Projects in the Netherlands

There was a diverse set of activities focusing on TB control in the Netherlands.

Netherlands Tuberculosis Control Policy Committee (CPT)
The Netherlands Tuberculosis Control Policy Committee (CPT) endorsed an update of the guidelines for screening of asylum seekers and immigrants. The most important changes were:
- Immigrants from countries with WHO indigence <100 per 100,000 are exempted from mandatory TB screening on entry.
- Migrants from countries with WHO indigence >200 per 100,000 eligible for follow-up screening may be offered LTBI screening as an alternative to biannual radiological screening in the first two years after arrival.

Against Tuberculosis
A special edition of Tegen de Tuberculose (Against Tuberculosis) was prepared, featuring presentations from the Netherlands during the Union World Conference of October 2018. This magazine will be published in the end of April. In 2020, we will stop the magazine in its current form and continue featuring achievements and news from the Dutch TB control and research institutes as part of the KNCV website.

DNA-fingerprinting
Handover support of DNA-fingerprinting surveillance to RIVM. DNA-fingerprinting and WGS is now an established method supporting TB surveillance. KNCV is in discussion with RIVM to handover the task to RIVM. KNCV initiated this project in 1993 in collaboration with RIVM. As of 2019, KNCV’s role in this project is limited as all the work is done under the auspices of RIVM.

Review of the Dutch TB Program
The third international review of the Dutch TB Program by a team of experts from ECDC and WHO-Euro took place. KNCV was one of the host-organizations and accompanied one of the teams during their visits. The review focused on developments in the introduction of LTBI screening among high risk migrants and Human resource requirements of public TB control system in view of pre-elimination.

Country List TB Screening and vaccination 2020
Every year, KNCV prepares the country list TB Screening and Vaccination. This list offers advice on BCG vaccination for children (0-12 yrs) and screening of immigrants and tourists.

European Advanced Clinical TB course organized
The 7th European Advanced Course in Clinical Tuberculosis (TB) offered an informative and interactive program with national and international speakers with a comprehensive experience in the field of clinical tuberculosis throughout Europe. The purpose of the course is to improve the capacity of medical specialists and TB control professionals in addressing the needs of TB patients and the challenges in TB control in their countries. The program featured updates on the epidemiology and the state-of-the-art of TB-immunology, diagnostics of TB, clinical management and patient-centered care. In addition, the program included an update on global developments in TB research and control. The course provided the participants a forum for interaction and collaboration with international colleagues. The course was organized by KNCV Tuberculosis Foundation, in collaboration with Erasmus MC and the consortium members Karolinska Institute, FIILHA and TBNet.

GeneXpertMTB / RIF test / Cepheid
The GeneXpert MTB/RIF test from Cepheid HBDC, endorsed by the World Health Organization (WHO) for roll-out in 2010, has tremendous potential for improving TB diagnostic capacity and, as such, TB control in high-burden countries.

The use of the GeneXpert MTB/RIF test is increasing exponentially at a global level. However, resource-constrained countries are faced with some operational difficulties and sub-optimal performance issues. These include, amongst other challenges, the following domains: (i) strategic planning of where to place the GeneXpert MTB/RIF machines; (ii) how to use them in a standardized fashion with a clear diagnostic algorithm; (iii) procurement and supply chain management of GeneXpert MTB/RIF supplies; (iv) required laboratory infrastructure (e.g., UPS, power surge protectors, electricity, air-conditioning, security); (v) training; (vi) routine supervision of laboratory and clinical staff; (vii) monitoring and evaluation of the quality of services (including linkages of the GeneXpert MTB/RIF test result with treatment and treatment outcome); (viii) installation and maintenance; (ix) troubleshooting.

KNCV was appointed as authorized service provider (ASP) for GeneXpert in the year 2014. The major role of KNCV as the ASP is to mitigate the above-mentioned challenges. The Cepheid project covers all GeneXpert in all states in Nigeria (36 + FCT). To achieve part of this broad strategy, KNCV proposes a collaboration with CEPHEID HBDC with a basic service package to support TB control in high-burden and developing countries through National TB control programs, National HIV/AIDS programs and other stakeholders by further ensuring well-functioning GeneXpert MTB/RIF equipment. In 2019, we continued to monitor the project’s Key Performance Indicators to show a reduced repair time for faulty equipment. We organized a stakeholders meeting between Cepheid and the National TB Program to provide lasting solutions including issues of comprehensive & constant warranty coverage and we provided trainings for additional test menus.

Nigeria

The Netherlands

Projects Worldwide

42

43
As part of the effort to avail simplified TB diagnostic methods for children, KNCV developed the Simple One-Step technique which utilizes simplified stool testing methods using Xpert/MTB/RIF assays. To further optimize the approach, KNCV in collaboration with the Ethiopian Public Health Initiative (EPHI), started implementation of the PODTEC project whose objectives are three-fold:
- Optimize the KNCV SOS method through a series of experiments using stool samples from confirmed samples
- Enhance specimen transport systems from remote areas by using electronic notification system
- Demonstrate the impact of these interventions under small-scale implementation condition in areas with limited access to TB services

The People-Centered Framework for National Strategic Plans (NSPs) development project, funded by the Bill & Melinda Gates Foundation (Development of prioritized NSPs for tailored applications to the Global Fund (GF)) assists nine NTPs in the development of people-centered, optimized, responsive, resilient and evidence-based NSPs using the people-centered framework for TB programming (PCF).

The PCF promotes better systematic utilization of available data and evidence in planning and program management by examining them following the patient journey along the care continuum (‘cough to cure’).

The approach also fosters a greater engagement of a wider relevant stakeholder community (including affected populations, community networks and organizations, relevant non-health sector partners and ministries, etc.) throughout the program cycle through a comprehensive partnership framework aligned to each stakeholder’s comparative advantage. This practice promotes greater consensus on findings, analysis and interpretation of the situation analysis and the resulting jointly developed course of action. In turn, this leads to greater country capacity, ownership and commitment among all stakeholders to invest and engage in a cohesive and optimized manner. Furthermore, it encourages better collaboration of all relevant stakeholders, by building on their respective comparative advantages and skills in both, planning, implementation and evaluation of the program.

The project documents the experiences gathered throughout the processes to refine the approach and develop relevant toolkits, guidelines and training materials as well as a peer support platform for mutual experience sharing and support between countries. The model approach is already WHO endorsed for future strategic TB programming worldwide and planning, program and epidemiological review guidelines will be revised in 2020 to align to the PCF approach. In 2019 we have started to assist the 9 countries which are all supposed to submit to the GF in windows 1-3 (between March and August 2020).

Alternatives to Sputum for TB Testing in Indonesia and Ethiopia (ASTTIE) / WHO

Diagnosis of TB in children is made difficult by children not being able to expectorate sputum on command. People living with HIV (PLHIV) often also find expectoration of sputum challenging. This project ‘Alternatives to Sputum for TB Testing in Indonesia and Ethiopia (ASTTIE)’ assesses how non-evasive testing (stool testing for children and urine testing for PLHIV) could confirm TB infection and would lead to more accurate diagnosis and timely treatment, and provides recommendations on how this testing can be incorporated into diagnostic algorithms. Since project approval in late 2019, the study teams were recruited and protocols were developed and fine-tuned in collaboration with stakeholders in Ethiopia and Indonesia ensuring readiness for full-scale project implementation in 2020.
E-DETECT/EDCTP

E-DETECT TB (Early detection and integrated management of tuberculosis in Europe) is a four-year collaborative project of TB experts, universities, charities and national TB programs supported by the EU.

The project started in 2015. The different work packages (WPs) in the project sought to utilize evidence-based interventions to ensure early diagnosis, improve integrated care and support community and prison outreach activities in low and high-incidence countries. KNCV was actively involved in three work packages: WP4 Outreach for early diagnosis, WP6 Establishing a database of latent and active TB in Europe, WP7 Supporting national TB programmes.

KNCV was the lead partner in WP4 in collaboration with the UK Find & Treat Project and the Romanian Marius Nasta Institute. Building on experience with active case finding in vulnerable groups in The Netherlands a screening project amongst prisoners was introduced with Mobile x-ray unit (MXU), and computer aided detection for TB (CAD4TB).

Although the initial objectives for WP4 were not reached, important lessons were learned from the project. In Romania, the project contributed to the launch of nation-wide active case finding project with the use of MXUs in November 2019. In WP6, the multinational database was established. A no-cost extension for this work package was granted by the EU, to enable the partners to analyze and report the data to a wider international audience. Several peer-reviewed publications on the achievements in E-detect TB work packages are in preparation.

TB Alliance Situational Analysis

In three countries, representing different geographical and epidemiological situations, KNCV conducted a situational analysis on acceptability, likelihood of implementation and costing of novel TB regimens (BPaL and BPaMZ), which are under development by the TB Alliance.

KNCV country teams in Nigeria and Kyrgyzstan and a country team from the Yayasan KNCV Indonesia conducted stakeholder interviews through focus group discussions and individual interviews; teams collected both qualitative and quantitative information. The country teams were supported by research and PMDT consultants from KNCV the Hague. Interviews were written and translated, all information was imported in a database and analyzed.

The results of the assessment were shared with the TB Alliance in reports. The BPaL report was shared with WHO, to inform new recommendations regarding the use of BPaL for patients with drug-resistant TB.

Planning for new regimen introduction / TB Alliance

Under the TB Alliance project on planning for new regimen introduction KNCV supported dissemination of knowledge on new all oral DR TB treatment options and planning steps for introduction of new drugs and regimens.

Aim was to ensure countries would be ready to apply new regimens once regulatory approval for these new treatment options would be available. In support of this, KNCV adjusted the KNCV generic planning tool and developed a research protocol for the introduction of new DR-TB regimens.

Subsequently KNCV conducted a regional workshop in Almaty, Kazakhstan, discussing the expected new drugs and regimens and related planning needs, with participation by NTP staff from Kazakhstan, Kyrgyzstan, Uzbekistan, Ukraine and Tajikistan (by teleconnection).

A similar workshop was held in Indonesia with staff from the Indonesia NTP, in collaboration with the Yayasan KNCV Indonesia (YKI). After the meetings KNCV and YKI country staff supported the development of country owned plans for introduction of new drugs and regimens. The KNCV and YKI country teams were supported by research, lab and PMDT consultants from KNCV The Hague.
As follow-on to the situational analysis on acceptability and likeliness of implementation of the novel TB regimens developed by the TB Alliance (TBA), the BPaL results were presented during TBA side meetings concurrent with the Union World Conference in Hyderabad.

In November the BPaL report was presented for the WHO guideline committee to inform new policies on DR TB treatment. Under this project drafts were made for scientific publication of the assessment results. In August 2019 the US FDA approved the BPaL regimen for treatment of patients with XDR-TB and/or treatment resistant or intolerant MDR TB. In follow-up of the planning for use of shorter all oral treatment regimens in Central Asia and Indonesia, under this project, after the FDA approval, KNCV continued to work with NTPs and partners to ensure readiness for BPaL implementation, once WHO guidance would become available.

The ASCENT (Adherence Support Coalition to End TB) project (July 2019 – Dec 2022) builds on existing evidence, innovations in adherence technology and growing global momentum to implement integrated DAT interventions in five key countries (Ethiopia, the Philippines, South Africa, Tanzania, and Ukraine) for all types of TB (DS-TB, DR-TB, LTBI).

Comprised of four key outputs, the ASCENT project will operationalize a DAT intervention in diverse geographic, cultural, and infrastructural settings (Output 1), generate evidence via a shared evaluation framework for optimal use and scale (Output 2), establish a global market for optimized products, price and supply chain models of DAT (Output 3), and engage with key global and in-country stakeholders to prepare for scale-up of the DAT intervention (Output 4).

With its strong consortium of partners (KNCV Tuberculosis Foundation, The Aurum Institute, London School of Hygiene & Tropical Medicine and PATH) and partnership with the governments of the implementing countries, the ASCENT project will contribute to the adoption and uptake of digital adherence technologies. The ASCENT project is made possible thanks to Unitaid’s funding and support.
The Challenge TB Project (CTB) is one of USAID’s major mechanisms to achieve the US Government’s global TB targets—and it played a major role in reaching those targets. It is a 5-year TB program (2014-2019) with a funding ceiling of USD 552.5 million. It is KNCV’s fourth successive five-year USAID TB award. The previous global flagship TB control projects were TB CARE I (2010-2015), TB CAP (2005-2010), and TBCTA (2000-2005).

CTB has three main objectives:

Objective 1: Expanded Access to Prevention Services
Objective 2: Improved Patient-Centered Quality Care Systems for TB, MDR-TB, and TB/HIV
Objective 3: Sustained and Enhanced Systems

During Year 5, the final year of CTB, the project was given a six months’ no cost extension (NCE) for five countries (Afghanistan, Botswana, Nigeria, Ukraine and Zimbabwe) for which additional workplans were developed and approved. Furthermore the Core Project on Prevention (WHIP3TB Trial with the Aurum Institute) received an extension with additional funds, as did the PAU for its’ management function. Results from the WHIP3TB Trial will be presented during the CROI conference July 2020 and a full trial report as part of the close-out of the CTB project.

Different from the NCE countries the majority of countries had an eleven months’ workplan; nine months for implementation of activities and two months for closing out. Activities at country-level stopped by the end of June 2019 and full close-out took place on 31 August 2019 in 18 countries and the East African Region. The countries had successful project close-out meetings with the participation of high government officials and USAID directors/representatives. Part of the events was discussing legacy documents and interventions that will be scaled-up by government and other TB stakeholders.

All countries End of Project Report as well as a Disposition Plan have been approved by USAID. PAU organized a Global Close-out Event at the Union conference in Hyderabad (India) together with USAID. The event on 1 November 2019 was proven a success with all partners and USAID involved, celebrating not only the successes and achievements of Challenge TB, but also two decades of KNCV collaboration with USAID.

Besides End of Project Reports and success stories, a compendium of technical briefs was developed by CTB Coalition partners; printed copies of selected briefs were distributed at the Union Conference in Hyderabad and electronic copies are available on the CTB website.

The EoP is finished and the content has been approved by USAID. The editing and lay-out is finalized and the report will be submitted by April 17th 2020. The audit just finished; we have not yet received the final audit report. Some remaining financial arrangements (like closing out of partners) are being finalized. The EoP report includes a financial report.
Besides operating through KNCV country offices, KNCV also works in close cooperation with a number of legally and financially independent entities that carry the KNCV name. After the set-up of Yayasan KNCV Indonesia a few years ago, in 2019 new independent entities were formed in Kyrgyzstan, Kenya and Nigeria. Building on the work KNCV branch offices started they are now continuing the work independently, but with strong ties through partnership agreements with KNCV Tuberculosis Foundation. We strongly believe the future of our work will have a firm local base and we are proud to be working with these local organizations on achieving our common mission.

Abdurahim (here with his mother) from Kyrgyzstan was misdiagnosed for a long time. He had spinal and intra-thoracic lymph node TB, a rare form of TB that mostly occurs in young children. Thanks to the KNCV-led Challenge TB Project he was diagnosed properly and finally cured.
Nigeria: An epitome of journey to self-reliance

Having transitioned some of the KNCV International human resources with the administrative, technical and infrastructural capacity by the end of the CTB project in September 2019 from a twenty-year experience in TB program implementation under the USAID to a local public health entity KNCV TB Foundation Nigeria; the latter is an epitome of the ‘journey to self-reliance’. KNCV International provided the needed support and the seed funding to set up the Nigeria local entity and the organization was registered with Corporate Affairs Commission (CAC) in Nigeria as of 8 August 2016 as a local NGO. Besides its vast technical capacity, KNCV Nigeria’s entire staff at central and sub-national levels honed its technical skills in working under various KNCV International projects in Nigeria since early year 2000. KNCV TB Foundation Nigeria is governed by a Board of Trustees (BOT) of seven members with three from KNCV International. KNCV International and KNCV TB Foundation Nigeria have developed and signed a partnership agreement. The local entity was also supported to have documented key policy guidelines in place. These policies which cover corporate governance, finance, cost allocation, standard operating procedures on sub-agreement, human resources and security have been approved by the Board of KNCV Nigeria.

KNCV Tuberculosis Foundation Nigeria has its vision “Nigeria Free of Tuberculosis” and mission “To eliminate TB through the development and implementation of effective, efficient and sustained TB control strategies”. KNCV TB Foundation Nigeria as a local NGO, secured approval after close-out of Challenge TB project to implement her maiden USAID funded “WASP Project” for one year across 14 states of in the country. “WASP” acronym stands for:
- Wellness on Wheels - Mobile Diagnostic Units
- Ad-hoc staff for high-burden GeneXpert sites
- Surge Initiative in nine states - TB active case finding in high burden facilities
- Programmatic Management of Drug-resistant TB (PMDT) in 12 states

Similarly, KNCV Nigeria has submitted and is hopeful in her application for a five-year USAID Local Organization Network (LON) project planned from 2020 to 2024. The new grant is to support comprehensive TB care across 14 states in Nigeria.

Kenya: Continuing as a local NGO

In the year 2019, we concluded the implementation of CTB East Africa Region (EAR) which focused on supporting IGAD to implement cross-border TB activities. For continuity of the cross-border activities and sustainability, we supported IGAD to prepare an annual Operation plan for the same activities up to September 2020 which was submitted to USAID KE/EA for continued funding. After closure of the CTB, the KNCV branch office closed and on initiative of former KNCV senior staff members, agreed by KNCV management team, the registration of the entity was changed to a local organization legally and financially independent of KNCV international. The Dutch directors retired from the board upon which Kenyan directors were brought on board. This will allow KNCV Kenya to apply for local funding opportunities which are increasingly targeted to local organizations for sustainability/self-reliance. With the local registration we are looking to tap into the local opportunities.

KNCV Kenya is now able to apply for local funding opportunities
Kyrgyzstan: A local NGO steps up the fight against TB

In August 2019, TB specialists and activists from the former USAID-funded Challenge TB project created a local NGO in Kyrgyzstan. It’s the first TB-focused, medical association in the country. This new NGO, ‘KNCV KG’, aims to continue fighting TB in Kyrgyzstan by: supporting patients and helping them complete treatment, organizing fundraising activities, training, and helping medical workers, advocating for better treatment schemes and innovations, finding and treating all missing persons with TB, and implementing research projects. A collaboration agreement between KNCV and KNCV KG is in place aiming amongst others at joined resource mobilization making use of synergies between the two entities.

As medical specialists, we understood the importance to build on our positive experience of patient-centered care, and the crucial need to create a local and medical NGO in the TB field. We want to have the flexibility to react to any problems and the necessary proximity to the population. We would like to link all TB services together, keep contact with local health facilities and, at the end of the day, push for self-reliance and advocate for further local funding and activities. Our staff is qualified and experienced to provide medical, social and psychological support to all in need, and represent the interests of patients and medical workers.

In its first six months of work, KNCV-KG has signed memoranda to collaborate with the NTP of Kyrgyzstan to help end TB, and with the National AIDS Center to help diagnose and treat people with co-infections. KNCV-KG has also established partnerships and started working with international and national donors and with local associations in touch with key populations (TB, HIV, migrants, etc.). KNCV-KG has already applied to four grants for new projects, for research and for equipment procurement (USAID “LON”, Japan Embassy “Grassroots and human security”, Soros, Radian) and for equipment procurement (USAID “LON”, Japan Embassy “Grassroots and human security”, Soros, Radian) and keeps looking for new opportunities to help end the TB epidemic in Kyrgyzstan.

Indonesia: Showing the way

I n 2016 KNCV supported the establishment of the local NGO Yayasan KNCV Indonesia (YKI), under the inspiring leadership of the (till then) Technical Director of the KNCV Branch office in Indonesia, Jhon Sugiharto. YKI is now a successful local NGO, playing an important role in rolling-out innovations in TB control in Indonesia, attracting large (sub) contracts from GF catalytic funding to find the missing patients with TB, expanding the use of District PPM model, which was developed and introduced under the CTB funding; running the pivotal SITRUST system, facilitating and tracking transportation of hundreds of thousands of laboratory samples and laboratory results all over the country; USAID Local Organization Network funding. Furthermore, YKI works together with KNCV in the Unitaid-funded IMPAACT4TB project on the introduction of new preventive treatment (3HP) and with KNCV and the TB Alliance on novel drug resistant TB treatment regimens. After the close-out of the CTB project in Indonesia, YKI, with its crew of dedicated staff, continues to be the KNCV torchbearer in the country. At the same time YKI works alongside KNCV in Africa to support strengthening of sputum transportation in Ethiopia.

Yayasan KNCV Indonesia (YKI) is now a successful local NGO, playing an important role in rolling-out innovations in TB control
The progress towards KNCV operational key performance indicators is presented below, based on national data for 2014 till 2018 from eleven ‘target countries’, where KNCV has country offices and comprehensive engagement over the period of this KNCV strategic plan: Botswana, Ethiopia, Indonesia, Kazakhstan, Kyrgyzstan, Malawi, Namibia, Nigeria, Tajikistan, Tanzania and Vietnam. Information on countries with limited KNCV involvement are provided under the respective project reports. National data were obtained from WHO’s TB global tuberculosis data base (https://www.who.int/tb/country/data/download/en/).

1) Finding more patients and reducing mortality

Over the period 2014 to 2018 the total number of TB patients diagnosed and registered for treatment in all KNCV supported countries combined significantly increased. Figure 1 shows an acceleration of case finding in 2017, a trend which continued in 2018. The total increase in case finding from 2014 to 2018 was 20% for bacteriologically confirmed cases and 34% for all patients.

This figure masks the different epidemiological situations in which KNCV works, with case finding varying from several thousands (Botswana, Kyrgyzstan, Namibia) to several hundred thousand of TB patients notified per year (over 563,000 in 2018 in Indonesia, and a baseline of 322,000 in 2014).

Therefore figure 2 shows the notification as percentage of the number of cases estimated to occur every year (case detection rate, blue bars). While Kazakhstan has a decreasing trend in absolute number of patients notified, this can be interpreted as a reflection of a nearly full treatment coverage (100% in figure 3) in a declining epidemic; The increasing trends in notified patients in Indonesia, Malawi, Nigeria and Tanzania are the result of targeted approaches to increase diagnosis, treatment and notification in countries with a low case detection rate.

2) Improving treatment completion among drug sensitive TB patients

Improving and maintaining treatment success among patients with drug-susceptible TB, aiming for at least a 90% treatment success rate, continues to be an area of concern. Importantly increasingly diverse and difficult to treat patient populations (based on active case finding and therefore reaching patients living under challenging social circumstances and/or having other diseases as well) puts pressure on health workers to provide patient-centered care to enable patients to complete their treatment. Increasingly also patients treated by a range of non-National Tuberculosis Program (NTP) providers are included in the statistics; not all treatment results are reported and in some cases treatment success rates are lower than among people treated in the public sector: while many non NTP public and private providers do a very good job in diagnosing and treating TB, some follow sub-optimal methods with less good results. As illustrated in figures 3a and 3b the trend differs per country and does not yet show the overall intended decline of mortality and improved treatment success; expansion of diagnosis and treatment of MDR and HIV among TB patients and more patient centered organization of TB services, decentralization of patient care, as well as the appropriate use of digital adherence tools and patient support, contribute to the overall decline in patients who died.
3. Treatment for patients diagnosed with drug resistant TB

The scale-up of MDR-TB treatment capacity 2015–2018 is shown in figure 4. The figure shows several important achievements. Kazakhstan is leading the way, being the first MDR-TB high burden country managing to overcome the MDR-TB epidemic: the country continues to diagnose and treat all MDR patients that occur annually, in addition to treating people diagnosed in the past for whom there used to be no treatment options; in line with the declining epidemic the number of patients treated decreases every year.

While PMDT scale-up is impressive, continued rapid expansion is needed especially in Indonesia, Nigeria, Vietnam and Ethiopia to treat all patients diagnosed by the rapid expansion of testing on the Xpert platform. More expansion is planned to ensure access to diagnosis and treatment for all MDR patients among the total estimated number of TB patients every year occurring in the countries: 21,000 in Nigeria, 24,000 in Indonesia, 8,600 in Vietnam, 1,600 in Ethiopia. These WHO estimates are slightly different from those reported last year, based on results of recent prevalence and drug-resistance surveys.

4. Testing of TB patients for HIV access to antiretroviral treatment

Continued attention for HIV testing of TB patients has shown results (figure 5), with ten out of the 11 countries reaching over 80% coverage, eight having completed scale-up, achieving over 90%. Only Indonesia is still in scale-up phase, increasing the number of people tested from 35,000 in 2015 to 209,000 in 2018 (out of 320,000 and 563,000 notified TB patients respectively and continuing scale-up of case finding as well as HIV testing throughout 2019.

The introduction of HIV screening at health center-level as implemented in districts supported by the KNCV-led CTB project, where over 90% of patients were tested, was important in increasing HIV testing coverage from 13% in 2016 to 37% in 2018.

KNCV continued promotion and facilitation of ARV treatment access for patients with TB/HIV, especially by supporting the introduction of joint TB/HIV service delivery (USD) and furthering patient-centered approaches. Access to antiretrovirals (ARVs) for TB/HIV patients (figure 6) increased in 2018 in nearly all countries, the largest gap is still in Indonesia, where in 2018 10174 patients were diagnosed with TB/HIV and only 4082 were provided ARVs.

Under the JSD approach in Jakarta, the percentage of TB/HIV patients receiving ARVs increased from 30 percent in 2017 to 60 percent in 2018; further scale-up of this approach and increased domestic investment in ARVs are expected to improve the situation. In Tajikistan the availability of ARVs improved in 2018 compared to 2017.

6. Measuring catastrophic health care expenditures

Under the CTB project WHO developed a handbook for the implementation of catastrophic cost surveys. By 2019, 14 countries (among which Vietnam, Nigeria and The Philippines) used different funding sources to complete national surveys measuring costs faced by TB patients and their households. Best estimates of the percentage experiencing catastrophic costs ranged from 27% to 83% for all forms of TB, and from 67% to 100% for MDR-TB.

Many KNCV-supported interventions are focused at increasing access to diagnosis and treatment of TB-like decentralization of diagnostic and treatment services, diagnosing patients in the communities and making services more patient friendly. Also, the introduction of new treatments for drug resistant TB is an important means to reduce costs to patients, especially due to the short duration and reduced side effects; over 2015 – 2019 KNCV has been particularly active in introducing these shorter treatment regimens. KNCV also supported countries to ensure timely disbursement of funds (from Global Fund and other resources) available for MDR-TB patients to compensate for their treatment related costs. These interventions are expected to eventually reduce the proportion of patients experiencing catastrophic costs; no repeat surveys were done yet to measure progress towards this goal. Nevertheless, this is still considered an important topic for elaboration under the next strategic plan.
2019 has been a very dynamic year in which we implemented a significant reorganization in KNCV in line with the new reality for the upcoming period 2020. An updated strategic plan has been developed and following the common principle of ‘structure follows strategy’ the organization is organized in such a way that we are well equipped to operate in line with this strategy. At the same time we continued to deliver results of ongoing projects, prepare for close-out of CTB at The Hague as well as in the different countries and continue resource mobilization efforts guided by our strategic direction. Whereas the first two quarters were used to develop and prepare the reorganization, the third quarter the actual reorganization was rolled-out, and during the fourth quarter we transitioned towards the new organization.

The main changes in the organizational structure in preparation of delivering our 2020-2025 strategy with a slimmed-down organization are:

1. KNCV moves away from the separate teams within the Technical Division; Within the pool of technical consultants more flexible thematic task forces will be set-up including both HQ staff as well as technical staff from the different countries.
2. The Finance Division and the Operations Division are merged into one Finance and Operations Division (F&O).

Also we have replaced country teams with multidisciplinary project teams. Regular processes remain in place to ensure country coordination.

The number of country offices has been reduced in view of a lower volume of funding. KNCV continues to strategically invest in selected country offices. In addition to the two organizational pillars – the Technical Division and the Finance and Operations division - these divisions have overarching supporting units: The Executive Office, Human Resource Management, Communication and Fundraising, Resource Mobilization, Secretariat and Facilities and IT, and International Policy and Advocacy.

Technical Division
Building on the achievements from the KNCV “initiatives” over the past five-year period, in 2019 KNCV increased emphasis on its role as innovator. The technical division reorganized from separate teams into one flexible pool of consultants, working together on strategic innovations in six thematic task forces, stretching across the KNCV network. These form the internal structure to ensure sharing of knowledge and experiences and generation of ideas across the organization and the KNCV affiliated local NGO’s; the task forces ensure the quality of the work implemented through the KNCV network, in the Hague and abroad, stimulating professional growth and institutional learning.

The task forces worked on the development of innovation pathways, to guide priority setting in assignments, communications and fundraising. At the same time the consultants are grouped in multidisciplinary international project teams, supporting ongoing projects and project development, together with the operations division. This structure serves the role of KNCV as a center of expertise in the Netherlands and abroad, that catalyzes innovation and provides specialized technical assistance, in collaboration with local KNCV offices and affiliates.

Along the innovation pathway, in 2020 the Technical Division will work to promote and assist implementation of new interventions for TB elimination in combination with evidence generation for policy making and scale-up, while continuing technical assistance for policy development and data driven strategic planning. The Technical Division will continue to provide short- and long-term technical assistance to countries, based on their priorities and the technical and funding opportunities and will continue to fulfill an important role as technical, advocacy and research partner in TB control abroad and in the Netherlands. With its highly skilled staff in the new organization the Technical Division is more resilient and flexible than ever to respond to opportunities for innovation and funding.

Finance & Operations Division
The following chapter gives an overview of the main activities of Finance & Operations (F&O) and the supporting units in 2019.

The main focus of the Operations side of the F&O division in 2019, besides preparing for the reorganization, has been to ensure all KNCV projects are successfully implemented and have achieved the project results we aimed for, all within relevant internal and external rules and regulations and within agreed time lines and budget.

We organize efficient and effective project management in multi-disciplinary country and project teams. All operations staff contributed to the development of new project proposals, setting-up newly awarded projects, management of ongoing projects, and responsibly closing-down projects. Throughout 2019 we guided in-country teams to either transition to the post-CTB context and/ or towards project closing-out activities as well as the closing out of some of the country offices. A detailed close-out check list to be used at country-level, including a timeline has been developed for this purpose. Special attention went to support the country offices with in-country human resource planning and management as we had to let go a considerable number of valuable staff members in different countries. We also focused on planning of handing over activities to other partners, as well as hand-over or disposition of equipment.

For the CTB the Year 5 workplans have been implemented working towards closing-out the project at the end of September 2019 in all relevant countries. Additional work plans are developed in line with the agreed no-cost extension, for a maximum of six months for a limited number of countries and activities. These include Botswana and Nigeria for the KNCV-led countries and the Prevention project.

We are happy to see that in 2019 the project portfolio of KNCV continued to diversify. To oversee the total project portfolio, we used a project tracking system and reporting tracking tools and financial status overviews per project for ongoing monitoring.

A total overview of all available tools, manuals, SOPs is developed in the Operations Division to facilitate project management in a multi-environment both at central-office-level as well as at country-office-level is finalized.

Related to security management, KNCV continued to work with a part time Security Advisor. The strategic security committee (Head of HRM, security advisor and the Director Operations) followed up on all relevant security related issues on a regular base.

A well-received plenary session on KNCV crises management took place at the last day of the Home week and in collaboration with HR and the security advisor.

As of Q4, financial, operational and project management expertise and experience is bundled and provides the support and control packages ensuring successful project implementation leading to results, and adequate monitoring and accountability.

The reorganization significantly impacted the F&O team. With a lower number of the and different people in new positions in the new set up we started to organize ourselves in the third quarter of this year to transition to the new organizational set up with updated roles and responsibilities.

In transitioning from country teams to project teams the project overarching coordination related to country offices has shifted to the head of Human Resources/Country office coordinator.

Different workflows have been adjusted to the new organization like time writing approval, invoice processing, purchase order creation, etc., that are better in line with the new organization.

The following chapter gives an overview of the main activities of Finance & Operations (F&O) and the supporting units in 2019.

The main focus of the Operations side of the F&O division in 2019, besides preparing for the reorganization, has been to ensure all KNCV projects are successfully implemented and have achieved the project results we aimed for, all within relevant internal and external rules and regulations and within agreed time lines and budget.

We organize efficient and effective project management in multi-disciplinary country and project teams. All operations staff contributed to the development of new project proposals, setting-up newly awarded projects, management of ongoing projects, and responsibly closing-down projects. Throughout 2019 we guided in-country teams to either transition to the post-CTB context and/or towards project closing-out activities as well as the closing out of some of the country offices. A detailed close-out check list to be used at country-level, including a timeline has been developed for this purpose. Special attention went to support the country offices with in-country human resource planning and management as we had to let go a considerable number of valuable staff members in different countries. We also focused on planning of handing over activities to other partners, as well as hand-over or disposition of equipment.

For the CTB the Year 5 workplans have been implemented working towards closing-out the project at the end of September 2019 in all relevant countries. Additional work plans are developed in line with the agreed no-cost extension, for a maximum of six months for a limited number of countries and activities. These include Botswana and Nigeria for the KNCV-led countries and the Prevention project.

We are happy to see that in 2019 the project portfolio of KNCV continued to diversify. To oversee the total project portfolio, we used a project tracking system and reporting tracking tools and financial status overviews per project for ongoing monitoring.

A total overview of all available tools, manuals, SOPs is developed in the Operations Division to facilitate project management in a multi-environment both at central-office-level as well as at country-office-level is finalized.

Related to security management, KNCV continued to work with a part time Security Advisor. The strategic security committee (Head of HRM, security advisor and the Director Operations) followed up on all relevant security related issues on a regular base.

A well-received plenary session on KNCV crises management took place at the last day of the Home week and in collaboration with HR and the security advisor.

As of Q4, financial, operational and project management expertise and experience is bundled and provides the support and control packages ensuring successful project implementation leading to results, and adequate monitoring and accountability.

The reorganization significantly impacted the F&O team. With a lower number of the and different people in new positions in the new set up we started to organize ourselves in the third quarter of this year to transition to the new organizational set up with updated roles and responsibilities.

In transitioning from country teams to project teams the project overarching coordination related to country offices has shifted to the head of Human Resources/Country office coordinator.

Different workflows have been adjusted to the new organization like time writing approval, invoice processing, purchase order creation, etc., that are better in line with the new organization.
coding and approval, and a new meeting structure has been set-up within the division and linking to other division and units. The KNCV Modus Operandi document has been, updated with input from all units and divisions. To be rolled-out in the organization beginning 2020.

Resource Mobilization: Broadening our funding base

The year 2019 can be characterized also as a year of major policy implementation by our major institutional donors. After the successful UN HLM meeting on TB and its target setting in 2018, 2019 marks the translation of that into policy at country- and partner-level. USAID released its policy “Journey to Self-Reliance”, the connected Global Accelerator to End TB and the funding mechanisms that will be part of the implementation of the policy. The two main funding mechanisms are the Local Organizations Network Project (LON) and the Tuberculosis Implementation Framework Agreement (TIFA). KNCV has become a LON-implementation partner in key countries like Nigeria and Ethiopia. In Nigeria the LON grant was awarded to the KNCV local entity and in Ethiopia KNCV International is partnering with Reach Ethiopia, a local NGO that was awarded the LON grant.

In 2019 KNCV also continued the intensified coordination between advocacy, communications, resource mobilization and technical areas in order to ensure optimal planning of focus, timelines and messaging and increase visibility and recognition of KNCV’s expertise both in the Netherlands and internationally. We explored options for increasing the funding base and engagement with major donors, corporate foundations and private foundations through more visibility and engagement, which resulted in new partnerships and enhanced exchanges with charity desks of banks, family offices and the network of notaries and estate planners. KNCV is in an ongoing process to diversify its funding base. In the course of 2019 KNCV led several consortia that were awarded funding from TB REACH and the Gates Foundation in the area of new drugs and regimens and National Strategic Planning. The KNCV SOS Stool Method, first introduced at the Union World Conference in 2018 as a promising method for diagnosing TB in children, was awarded funding from a private foundation and the WHO for further research in optimizing the method.

Campaigning & Fundraising Communication highlights

2019 was a year with great communication highlights. There were new events and events that already have proven their worth. We received a considerable amount of (international) press attention. We also managed to raise a higher level of awareness both in the Netherlands and abroad. The communications team has been fully engaged in creating opportunities to emphasize the urgency of the TB control activities that KNCV undertakes.

Events create awareness

Every year we have World Stop Tuberculosis Day on 24 March. In 2019 we launched our Dutch awareness and fundraising campaign with the slogan “Wij laten TBC een poepie ruiken” (a typical Dutch expression that basically means “We will show TB what we are made of”). With this campaign we highlighted the good work KNCV does, in this case with the KNCV SOS Stool Method, through social media, street marketing and free publicity. The theme of our campaign also formed the basis for our very first fundraising event ‘De TBC sponsorloop’ (TB Sponsored Walk). With nearly 150 enthusiastic participants and parties who are invested in our cause (including the city counselor of Hilversum, the city in which we held the walk), we look back on a successful event at Zonnestraal, a former sanatorium in Hilversum.

Internationally we positioned ourselves with the reorganization of the Wolfheze Workshops, together with WHO Europe and ECDC. A successful international meeting with 160 TB experts from over 40 countries.

Strengthening press relations works

Investing in the relationship with national and international press is bearing fruit. A media field trip with a group of journalists to Kyrgyzstan resulted in a number of articles in for instance The Daily Telegraph (published on 3 April 2019) and on BBC Health Radio. The articles revolved around the results of the introduction of shorter regimens in Kyrgyzstan that were presented in a press conference of USAID. We did not only generate press coverage, but also collected many stories and photographs during the press field trip which fit well into our storytelling strategy.
Towards the end of the year a three-page article was published on KNCV in the popular women’s magazine Margriet. The article described our heartfelt story about her visit with KNCV to TB patients in Ethiopia. Her story and call for support reached almost two million women.

Multimedia campaign with endorsement

The article in Margriet also marked the beginning of an extensive multimedia fundraising campaign aimed at the Dutch public. We placed advertisements with a QR code and a call to action for donations. At the same time we sent direct mail packages to existing and lead addresses containing a mini edition of the Margriet article. The campaign also extended to social media and online mailings. This campaign led to more direct interaction with the Dutch public this past year then occurred in the years before. However, the number of new donors and proceeds from donations are unfortunately still not where we would like them to be.

KNCV distinguished itself in India

This year the 50th Union World Conference took place in India. The strongly branded KNCV booth stood out and was well visited. On the spot, contacts were made with various international media. Our technical colleagues were successfully linked to international press which generated press coverage around the world on different topics.

Impact from the Lotteries

The (charity) Lotteries are very important to us. The number of active donors is unfortunately not where we would like them to be.

More visitors on our website

Our KNCV website is an important channel for all stakeholders to read our technical tools and information. This year we worked on refreshing the site and bringing the Dutch website into line with our international site. Hard work has been done on an affordable way to implement an improved search engine on both the Dutch and English sites. The preparatory work has started and implementation will follow in February 2020. We are pleased to notice that the number of visitors to our site has risen from 62,000 visitors to even 93,000 in the third quarter, due to our campaigns and quiz-advertisements on social media.

International Policy and Advocacy

KNCV’s international policy and advocacy engagement is a core activity in support of the mission to eliminate TB. It is also an enabling function, by influencing Dutch policy and funding for TB and enhancing the positioning of the organization.

During 2019, KNCV continued implementation of its advocacy grant to strengthen Dutch engagement and official development assistance (ODA) funding for TB, HIV and R&D for Health. Through funding in another grant, KNCV staff serves as chair of the Audit and Finance Committee of the GF Board.

As part of our institutional positioning agenda for 2019, we built on the traction gained in 2018 in the Netherlands. As a side-event at Micropia (the microbes museum in Artis), Dutch civil society called for public awareness on AMR. Kitty van Wezenbeek represented KNCV at the Ministerial Global Health Security Top on AMR hosted on June 19-21 in the Netherlands. At a side-event at Micropia (the microbes museum in Artis), Dutch civil society called for public awareness on AMR and a stronger connection between science, policy and society to ensure an effective response to AMR. This civil society coalition convened representatives from academia, NGOs engaged in global health and domestic public health.

Key achievements in 2019 include:

1. In January, a Clingendael Global Health Initiative (CGHI) meeting led to the Ministry of Health and Ministry of Foreign Affairs engaging the NGO actor field in the preparation of AMR top (June) and Mental Health top (October) respectively.
2. Early March, KNCV hosted GF Executive Director Peter Sands for a NGO roundtable and arranged, with a broad coalition of NGOs, a Parliamentary briefing.
3. In May, TB and HIV Accountability vis-à-vis the UN High Level Meeting (2016 and 2018) targets was reinforced in the program of Wolfheze conference. The Dutch Ministry of Foreign Affairs (DG DGIS) opened the Wolfheze Conference and the Ministry actively contributed to these sessions.
4. Mid-May 2019, the outcomes of KNCV support to sustainable financing of the health response in a de-centralized health financing system was presented by the Indonesia Ministry of Health to a side meeting to the GF Board Meeting. Thus the outcome of advocacy work by the KNCV country office was featured.
5. Anne Kuik (Member of Parliament for CDA) actively engaged as Dutch TB Ambassador during two field visits (Beatrixoord and Nijmegen) in the course of the year. In a September visit to Dutch Parliament, representatives of the Global TB Caucus enhanced TB visibility and the role of Dutch expertise in tackling the disease. Policy education on the Product Development Partnership (PDP) funding stream will be stepped up during 2020. KNCV has a role in accelerating the roll-out of new drug regimen and thereby brings the outcomes of Dutch funding of PDP to fruition.
6. Advocacy engagement contributed to KNCV positioning a for funding: dialogue on the GF Domestic Resource Mobilization strategy in the NGO delegation led to KNCV bringing together a Southern-led coalition of CSOs which is developing ways to strengthen in-country health sector advocacy capacity.

IT & Facilities

Due to the reorganization there were a lot of account changes (staff leaving, staff changing positions). Besides handing these many changes in 2019, the focus was on preparing the introduction of Multi Factor Authentication in The Hague and Mobile Device Management (Intune). Also preparations were made to move the shared folders that are currently on an IaaS platform to Sharepoint in 2020. Cost efficiency and security are important topics. Several measures to reduce IT costs have been discussed, including a possible move to a more standardized way of operating with our IT supplier in The Hague (1ICT) in 2020 and savings on licensing costs. A server hack in Malawi resulted in reinforcement of back-up procedures and additional security measures.
2019 was a challenging and transformative year for the organization following the completion of the financing of USAID for Challenge TB. The organization responded without delay, guided by management and in close consultation with the Board of Trustees. As soon as it became known early April that USAID granted a 6 months no-cost extension for only five countries and PMU, management expediently planned the reorganization and downsizing during April. The reorganization plan was discussed with the Board of Trustees in May and, following a positive advice by the Works Council, approved early June. Staff were informed by mid-June, with most changes consummated at the Challenge TB end-date of October 1, 2019. A small close-out team has stayed in place through the first quarter of 2020.

The solid response of the organization and management was facilitated by anticipating events as they unfolded: the Executive Director and senior management kept staff informed with regular updates to staff and Works Council in the protracted period awaiting USAID’s final decision on a no—cost extension (throughout 2018 and early 2019). The transparent and open communication with staff and having a Works Council approved social plan in place proved invaluable in establishing the foundation for decision-making and implementation. In this way uncertainty for staff was minimized to the extent possible. By October 1st, the organization had downsized and was ready to enter the next phase based on the Strategic Plan 2020 – 2025, approved in November.

Beyond resilience in the face of turbulence and painful changes, the organization demonstrated its full commitment and unabated focus on delivering the final year of implementation of the Challenge TB project. Close-out events in all countries as well as globally at the Union Conference in India, paid tribute to the achievements of 5-years Challenge TB and provided an opportunity to reflect on the 20-years engagement as USAID’s chief implementer of its flagship TB programs.

Building on the achievements under Challenge TB and transforming its ways of engagement, the organization is well—poised for the future. In the 2020 – 2025 Strategic Plan KNCV is focused on its technical core and has diversified its funding base securing contracts with a variety of donors. This underpins a pronounced role in introducing new TB treatment regimens, new preventive TB screening and treatment options, as well as development of digital adherence tools. Guiding principles are: focus on developing and embedding innovations into TB control programs, thus providing national scale up.

The year in review: Board of Trustees oversight

With the financial challenges to the organization following the end of the five-year Challenge TB contract, the Board of Trustees stepped up its engagement with the organization during the re—organization phase. The Chair and Executive Director had regular consultation calls, which enhanced Board of Trustees involvement and oversight and inspired confidence in progress and directions. The Audit Committee supported the Board of Trustees with in-depth assessments of KNCV’s financial position on two occasions: in May, the Audit Committee analyzed the financial parameters and scenarios underlying the reorganization plan in support of the Board of Trustees approval of the reorganization; as part of the reorganization the Board of Trustees endorsed the decision to combine the CFO and COO roles in the new organization, in November, the budget 2020 and timeline towards getting back to break-even in the course of 2021 were assessed. This resulted in Board of Trustees support for the proposed budget 2020 and conditional approval of the budget through the first half of 2020, conditional on agreed savings and resource mobilization targets.

The annual retreat of the Board of Trustees with senior KNCV staff, in July, centered on KNCV’s response to the shifting donor landscape and measures to enhance institutional flexibility in response to the shifting donor and political realities. Various ways and the necessity to bring down KNCV’s cost structure were explored in

the November Board of Trustees meeting. Board of Trustees engagement contributed to a new salary house being approved with consent of the Works Council. This new salary house is a major step forward in a structural reduction of staff costs and bringing them within market benchmarks, and its benefits will accrue in the budgets going forward. In addition, the move to new housing, as approved by the Board of Trustees in November, contributes to a reduction in the fixed costs level. Further cost reductions remain necessary during 2020. The Board of Trustees will review medium term financial prospects in the second quarter of 2020.

In November, an additional meeting of the Board of Trustees was convened to approve the move to new premises and for a dedicated discussion in which the Board of Trustees provided input to the proposed Strategic Plan 2020 – 2025. The Board of Trustees approved the Strategic Plan 2020 – 2025 in its regular November meeting, noting the conditional approval of the Budget 2020.

To enhance relations with the KNCV Members, an information session was convened towards year-end, at the initiative of the Chair of the Board of Trustees following and announced at the Annual Meeting of Members. During this meeting, KNCV Members were briefed on the re—organization and future strategic direction. This additional meeting with Members was valued for building trust between the two supervisory governance bodies of the organization and strengthened Members’ insight into KNCV’s strategic direction at a crucial juncture for the organization.

Board of Trustees developments

The Board of Trustees is composed of seven members from a variety of backgrounds and experience in academia, medical profession, corporate and public sector. The Board of Trustees is dedicated to providing complementary value for the organization while carrying out its primary task of oversight. The individual focus and expertise areas of the Board of Trustees result in a collectively strong, diverse, complementary skill set: In May 2019, the General Assembly appointed Mirella Visser to a second term of four—years until May 2023.

**KNCV in 2020**

During 2020 KNCV will be completing its transition to a fit-for-the-future organization, focused on its technical core strengths and stepping up its role in innovation. The ways of working in partnership with KNCV country offices will transform, seeking synergies and further defining complementary strengths. Donor trends from centralized funding to country-level funding we expect will continue to unfold. This will require a focus on continuing to harness opportunities and meet challenges such as shorter funding cycles, greater uncertainty and rapid adaptation of activities to fluctuating levels of funding.

Early 2020 Executive Director Kitty van Weezenbeek announced her departure from the organization to assume the position as WHO Director Surveillance, Prevention and Control of AMR, per 1 May 2020. The Board of Trustees expresses its sincere gratitude to Kitty van Weezenbeek for her exceptional contribution to the KNCV mission and organization.

The Board of Trustees has appointed Mustapha Gidado as Acting Executive Director per 1 May. Gidado has served as Director Challenge TB and been with the organization since 2012. The Board of Trustees is confident that the arrangements with a strong management team under the leadership of Gidado will assure continuity and expedient implementation of the Strategic Plan 2020 - 2025. Board of Trustees expects to appoint a definitive successor Executive Director later in the year following an open recruitment process which is underway.

At the writing of the KNCV Annual Report the world is starting to face the effects of the COVID-19 crisis, affecting KNCV’s work at the respective offices and in the field around the world. Public health conditions in particular will be profoundly affected for the months and the year ahead. The Board of Trustees is on stand-by for monitoring KNCV’s response and for consultation. We express our confidence in the organization’s ability to contribute its expertise and insight to support public health systems meet these challenging times and to stay a steady course in the trying times ahead.

The Board of Trustees is proud of the achievements in fulfillment of the KNCV mission in the year under review. We greatly appreciate the strong dedication of all KNCV staff, overseas and in The Hague, while facing organizational uncertainty which impacted personal life of staff and their families.

Statutory name, legal state and place of residency
The ‘Koninklijke Nederlandse Centrale Vereniging tot bestrijding der Tuberculose’ (KNCV or KNCV Tuberculosis Foundation) is an association of members according to Dutch law. Members are associations and foundations which have TB control as their mission or area of work.

The latest version of the Articles of Association passed the notary deed on 23 August 2012 and can be found on our website. The central office is located in The Hague, the Netherlands. Through 2019 KNCV operated 13 country (branch) offices. Following the close-out of our Challenge TB agreement, KNCV closed five offices in 2019, and continues to operate seven branch offices worldwide. As part of our strategy to establish a network of affiliated KNCV partners four offices registered an independent local entity governed by a (predominantly) local board. KNCV is establishing governance and quality standards which are up-held to warrant the brand value.

In 2019, and continues to operate seven branch offices worldwide. As part of our strategy to establish a network of affiliated KNCV partners four offices registered an independent local entity governed by a (predominantly) local board. KNCV is establishing governance and quality standards which are up-held to warrant the brand value.

The objective of the General Assembly is to ensure that KNCV’s activities make the best possible contribution to the statutory mission. The General Assembly has a supervisory and advisory role in this respect. The primary responsibility of the General Assembly is supervisory governance, as described in the KNCV Governance and Management Framework Applying ‘Good Governance’ at KNCV. The General Assembly is authorized to:
- Approve the annual accounts;
- Grant annual discharge from liability to the Executive Director;
- Grant annual discharge from liability to the Board of Trustees for supervisory governance;
- Appoint, suspend and dismiss the Board of Trustees and its members;
- Appoint the auditor;
- Change the Articles of Association;
- Dissolve KNCV.

In 2019, the General Assembly’s Annual Meeting took place on 8 May 2019. The General Assembly granted discharge to the Board of Trustees for the supervision performed and to the Executive Director for the management of the organization for the year 2018. Additionally, an informal briefing for KNCV Member organizations was convened on November 26. Purpose was to provide an update following the re-organization and a pre-view into the KNCV Strategic Plan 2020 – 2025 as adopted by the Board of Trustees on the same day.

Board of Trustees
The objective of the Board of Trustees is supervisory governance, including approval and oversight on the overall strategy and direction of KNCV. The Board of Trustees rules and regulations are set in conformance with Dutch legal provisions and the Code of Good Governance for charity organizations (‘SBF- code Bestuur van de Samenwerkende Brancheorganisaties Filantropie’). The Board of Trustees is composed of five to seven members, jointly representing a set of competencies, as defined in the rules and regulations of the Board of Trustees.

Board of Trustees members are recruited through co-optation and are appointed by the General Assembly for a term of maximum four years upon nomination by the Board of Trustees. Members can be reappointed for a second term. The Board of Trustees appoints a Chair and Vice-Chair from its Members. Members of the Board of Trustees give their time and expertise and do not receive any remuneration. Out-of-pocket expenses to attend meetings are reimbursed in addition to a generic expense compensation of € 100 for each Board of Trustees meeting attended. The Board of Trustees meets four times a year and chairs the General Assembly. Once a year a strategic retreat is organized together with the senior management of KNCV.

Three permanent sub-committees have been established with the following preparatory tasks:
- An Agenda Committee to prepare the board agenda, in consultation with the Executive Director;
- An Audit Committee to assess in detail the annual plan and budget, annual financial report, and the findings of the independent auditor;
- A Remuneration and Assessment committee to assess the performance of the Executive Director.

Temporary committees can be established on ad hoc basis.

Supervisory governance during 2019
For an extensive description on the supervisory governance during 2019, please see the Board of Trustees Report prior to this chapter.

January 2019, Chair and member Wienke Meijer visited KNCV’s operations in Indonesia in January. They debriefed Board of Trustees in meeting on 19 February.

At the General Assembly in May 2019, Mirella Visser was re-appointed for a second term, 2019 – 2023. The annual self-assessment was conducted in preparation of the Board of Trustees meeting in February 2020. On 18 February 2020 the Board of Trustees completed its discussion of the annual self-assessment covering 2019 and reviewed its effectiveness and composition.

A delegation of the Board of Trustees attended a meeting between Works Council and Executive Director this year on November 26, 2019.

In 2019, six Board of Trustees meetings were held on the following dates: 19 February, 16 April, 8 May, 24 September and 5 and 26 November. Two additional meetings, on 8 May and 5 November, were convened in respect of the re-organization and development of the Strategic Plan 2020 –2025 respectively. Audit Committee meetings were held on 9 April and 21 September and 5 and 26 November. Two additional meetings, on 8 May and 5 November, were convened in respect of the re-organization and development of the Strategic Plan 2020 –2025 respectively. Audit Committee meetings were held on 9 April and 21 September and 5 and 26 November. Two additional meetings, on 8 May and 5 November, were convened in respect of the re-organization and development of the Strategic Plan 2020 –2025 respectively.

The Board of Trustees has the following relevant other positions that are listed below. The members of the Board of Trustees have signed an annual statement from the CBF regarding the avoidance of conflicts of interest.
Executive Director

KNCV Tuberculosis Foundation is led by an Executive Director who holds statutory powers.

Executive Director

</tbody>
</table>

The Executive Director (ED) is supported in decision-making by the Management Team. Following the re-organization (effective October 1, 2019) the Management Team continues to be composed of the Executive Director and two division directors of KNCV (Technical Division, Finance and Operations Division) and was expanded to include the Manager TD, Heads of HRM, Communication, Resource Mobilization and Senior Advisor Public Affairs. An Executive Committee, composed of the ED, Directors TD and F&O, Manager TD supports the ED in respect of statutory decision-making. The organizational structure of KNCV includes a non-statutory Deputy Director who is part of the Management Team and Executive Committee. The incumbent as non-statutory Deputy Director, Lucian Roeters, will be succeeded ad interim by Diana Numan as of 1 April 2020. The performance of the Executive Director is assessed by the Remuneration and Assessment committee of the Board of Trustees. The committee reports their findings to the Board of Trustees.

The Executive Director held during 2018 the following relevant positions and responsibilities:

Works Council Year Report 2019

As Works Council we want to be the eyes and ears of the organization and represent the interests of all employees. We strive to maintain a good balance between looking at employees’ wellbeing, interests and working conditions on the one hand, and the organizational interests on the other. Elections were held in November. The composition of the Works Council did not change till the elections in November 2019. New members started effectively January 1st 2020.

It was a busy year for the Works Council and we discussed and advised on important topics that concerned the whole organization. The chair of the Works Council participated in the management team (MT) retreats.

Main topics discussed were the salary house, the reorganization and new office housing. Monitoring workload and remained an important topic on the agenda especially in light of the reorganization. During 2019 we had a training and updated our policy paper and discussed our focus for the coming year(s).

We gave consent to a new salary house to be prepared for the future. The Works Council said goodbye to Danielle Zuidema as the secretary of the Works Council after a short period of six months. The recruitment of a new secretary started December 2019.
GOVERNANCE AND ORGANIZATIONAL REPORT

At the end of December 2019, the Works Council members were:

Quality Control
KNCV considers quality an essential hallmark of all the work we do. In 2019, to ensure quality in our activities, deliverables and results the organization relied on and assured compliance to processes that support standardized, high-quality performance. This includes standards of excellence and review processes for key KNCV technical functions, such as short-term technical assistance through consultants at country-level and developing high-quality work plans and reports. KNCV tracks and reports on the outcomes of short-term technical assistance as well as provides systematic technical quality review for deliverables generated for all donor-funded projects.

To ensure that KNCV staff are up-to-date on the latest technical developments in TB control and elimination, the Technical Division organizes quarterly meetings when key technical staff gather in technical discussions on innovations in alignment with the priorities as set out in the Strategic Plan and the periodically updated Theory of Change.

To sustain the quality of internal management and processes within the organization, KNCV uses a cycle of strategic and annual planning, implementation, monitoring and evaluation, adaptation of plans, and accounting for results. This process has been described in the document “Management and supervision of KNCV’s Good Governance Code-applied.” The overall functioning of the organization and progress of the implementation of plans is continuously monitored by the Management Team and Executive Director, and is regularly reviewed in Board of Trustees meetings. For the projects and programs funded by institutional donors, interim reports are sent to the funders and evaluated for effectiveness and efficiency. External auditing of the administrative and financial operations are carried out by PriceWaterhouseCoopers Accountants N.V. The independent auditor was appointed by the General Assembly in 2011. The directors have regular progress meetings with the independent auditor. Every year, the independent auditor reports their findings to the Audit Committee. All audit reports and management letters are shared with the Board of Trustees.

Compliance with ethical fundraising standards is tested using guidelines from the Central Bureau for Fundraising in The Netherlands (CBF) and sector organization, Goede Doelen Nederland (GDN).

Risk Management
We are aware of the fact that as an organization we are exposed to risks. The Executive Director reports on risks to the Board of Trustees on a regular basis. Once a year a comprehensive risk analysis is done, assessing risks, controls, and mitigating actions. This assessment involves senior management and the report is discussed in the Management Team meeting. The internal risk analysis and significant changes and/or improvements in internal controls are reviewed with the Audit Committee and the full Board of Trustees.

Information security
KNCV adheres to the new policy on the obligation to report data leaks “meldplicht datalekken in de Wett bescherming persoonsgegevens (Wbp)” introduced on 1 January 2016 and the “Europees Algemene verordening personenbeveiliging (AVG).” KNCV has a data security policy and a procedure on how to report data leaks in place. This includes an inventory of types of sensitive information within KNCV, drafting of ‘bewerkersvereenvoukomen’ with suppliers and preparing a checklist with action points. KNCV has appointed a data security officer. In 2018 all staff were trained on security. A privacy policy and privacy statement were drafted, and the website was made compliant to AVG requirements. All data processing processes have been inventoried and checked against AVG requirements.

In 2019 one incident has been evaluated. After evaluation no report was made to the Authorized Personsbeveiliging, because the incident was not considered a data leak. The incidents have helped us in developing our policy and will be included in training materials for all staff.

Codes of Conduct
KNCV has a number of codes of conduct which guide the ethical behavior of staff and protect their employment with the organization. These are:
- General Code of Conduct;
- Code of Conduct for the use of e-mail, social media, internet and telephone facilities;
- Policy and protocol for undesirable behavior at work;
- Policy on fraud, money laundering and trafficking in persons;
- Whistle-blower policy.

In 2019, no incidents have been reported to the external confidential counsel related to undesirable behavior of others. During 2019 our integrity policy as updated in 2018 remained unchanged. In 2020, Head of HRM and or the Director Operations will follow new workshops on Integrity, organized by Goede Doelen Nederland. We hereby assure that integrity is continuously on the agenda and that we make optimal use of available tools to operationalize this on different levels in the organization. For example, the online integrity tool developed by Goede Doelen Nederland will be integrated to the whole organization during a lunch meeting and then implemented in all offices. Furthermore based on experiences and recently developed guidelines of Goede Doelen Nederland, KNCV’s Code of Conduct will be reviewed and adjusted.

During 2019, two reports were made of (attempted) fraudulent activity in our office in Malawi. One incident was related to copies of fuel cards being handed out to fuel stations for possible future benefit. The other related to the theft of three laptops from the storage room. Both incidents have been reported to the donor.

Additionally, an integrity workshop has been conducted in four country offices. Head HRM and Director Operations followed three workshops on Integrity, organized by Goede Doelen Nederland. Based on the experiences and recent developed guidelines of Goede Doelen Nederland, KNCV’s Code of Conduct will be reviewed and strengthened in 2020.

Media Policy
KNCV uses national and international (social) media to profile our work in fighting TB. Through the media (online and offline) we aim to reach the general public, professionals, politicians and policy-makers. We strive for transparency. We keep a close eye on anything relevant appearing in the media and actively engage in discussions with the public, our stakeholders and critics. We respond immediately to messages that are not based on facts and seek to correct representations of our work, where appropriate. We actively monitor information and the (social) media concerning TB control and our organization and react to current developments and possible (negative) publicity if and when incidents arise.

Social Responsibility and sustainable development goals
KNCV wants to be a responsible organization when it comes to our organizational footprint. We try to balance our strategic goal of a world free of TB with social, economic and environmental responsibilities. An important part of our work is related to stigma reduction, which also includes gender bias and sexual orientation. As an employer, we promote equal employment opportunities. We avoid paper wastage by enforcing double-sided black and white printing as much as possible, we use environment friendly printing. Obviously, an important side-effect of our work in southern countries is the emission of CO2 because of the number of flights we take. We have decided not to financially compensate for this emission, since this would take funding away from our core objective. We try to combine missions as much as possible, aim to reduce the number of trips we make, and increasingly make use of video and skype-conferencing based modes of conferencing.

External Quality Hallmarks
Since the transition to the “Erkenningsregeling” in 2016 KNCV has been acknowledged as a CBF recognized charity, based on a self-assessment that was performed in 2016. A new evaluation has taken place in 2019 and based on that KNCV continues to be a CBF recognized charity.

The document “Management and governance at KNCV – the code for Good Governance Code application” describes our governance structure, management procedures and regulations in detail. A summary of the accountability report, outlined below, is sent to the CBF annually.
Summary of the CBF accountability requirements

Any fundraising organization who has been acknowledged as a CBF recognized charity has to demonstrate that it adheres to a list of predefined norms and standards in seven categories:

1. Mission/social value
2. Means
3. Activities/organization
4. Realization of goals
5. Governance
6. Accountability
7. Stakeholders

The norms define how the principles for good governance are being applied. These are:

1) Division of tasks in governance, management and operations
2) The continuous improvement of efficiency and effectiveness in mission related activities
3) Optimizing the communication and relationships with stakeholders.

This Annual Report contains a summary of the accountability report.

Ad 1. Division of tasks in governance, management and operations

KNCV has described its governance and management structure in the document, ‘Management and governance at KNCV - the code for Good Governance Code application’.

Through the development, management, and maintenance of this document, we seek to achieve the following:

- Implement the requirements for governance and ensure there are sufficient visible ‘checks and balances’.
- Frequently audit the management and governance structure in order to assess and comply with new developments according to relevant regulations and laws.
- Create a frame and guideline for the different management layers in the organization and connect the various policy documents and by-laws. The document serves as a manual for all governing bodies and their appointed members.

Ad 2. The continuous improvement of efficiency and effectiveness in mission related activities

KNCV has developed and implemented a set of mechanisms to continuously and coherently drive for improvement in its operations, especially in terms of efficiency and effectiveness. These include:

- A planning, monitoring and evaluating process composed of a strategic long-term plan and an annual planning and control cycle, for mission related goals, for resource allocation and enabling environment.
- Performance indicators are used to assess the progress in reaching strategic and organizational goals.
- A procedure for assessing new projects and/or acquisition proposal development.
- Monitoring and evaluation systems at project and institutional level.

Ad 3. Optimizing the communication and relationships with stakeholders

KNCV is part of a large partner network of public and private organizations and individuals, all contributing to the realization of our mission. The structure and composition of our network is outlined in figure 8.

Creating and maintaining support (both material and immaterial), transparency, and accountability in all our processes, is the focus of our communication with all stakeholders. The overall goal of our corporate communication is to support our mission by creating, maintaining, and protecting KNCV’s reputation, prestige, and image. Our communication with stakeholders is based on the following principles:

- We are transparent and report on our successes and lessons learned.
- We communicate pro-actively, where possible.
- We communicate through unambiguous and consistent key messages.
- We tailor our communication messages and media to reach our key audiences and target groups.

Ad 4. Realization of goals

This Annual Report contains a summary of the accountability report.

In addition to the articles of association, the operational modalities of all governance structures are described in the following regulations and documents, available upon request:

- Rules and Regulations for the General Assembly;
- Rules and Regulations for the Board of Trustees;
- Rules and Regulations for the Audit Committee;
- Rules and Regulations for the Remuneration and Assessment Committee;
- Rules and Regulations for the Executive Director;
- Rules and Regulations for the Management Team;
- Rules and regulations with regard to the relation between the Works Council and the Executive Director.

Ad 5. Accountability

KNCV is part of a large partner network of public and private organizations and individuals, all contributing to the realization of our mission. The structure and composition of our network is outlined in figure 8.

Creating and maintaining support (both material and immaterial), transparency, and accountability in all our processes, is the focus of our communication with all stakeholders. The overall goal of our corporate communication is to support our mission by creating, maintaining, and protecting KNCV’s reputation, prestige, and image. Our communication with stakeholders is based on the following principles:

- We are transparent and report on our successes and lessons learned.
- We communicate pro-actively, where possible.
- We communicate through unambiguous and consistent key messages.
- We tailor our communication messages and media to reach our key audiences and target groups.

Ad 6. Activities/organization

This Annual Report contains a summary of the accountability report.

In addition to the articles of association, the operational modalities of all governance structures are described in the following regulations and documents, available upon request:

- Rules and Regulations for the General Assembly;
- Rules and Regulations for the Board of Trustees;
- Rules and Regulations for the Audit Committee;
- Rules and Regulations for the Remuneration and Assessment Committee;
- Rules and Regulations for the Executive Director;
- Rules and Regulations for the Management Team;
- Rules and regulations with regard to the relation between the Works Council and the Executive Director.

Ad 7. Stakeholders

Any fundraising organization who has been acknowledged as a CBF recognized charity has to request:

- Rules and regulations with regard to the relation between the Works Council and the Executive Director.
- Rules and Regulations for the Board of Trustees;
- Rules and Regulations for the General Assembly;
- Rules and Regulations for the Executive Director;
- Rules and Regulations for the Management Team;
- Rules and regulations with regard to the relation between the Works Council and the Executive Director.

Accountability to stakeholders is ensured both prior to and after implementation. The results are presented at the General Assembly meetings, on the website, newsletters, and in project reports.

Figure 7: KNCV model for governance and management

Figure 8: KNCV model for governance and management

1 The full set of mandatory and non-mandatory norms can be retrieved from the CBF website.

- Inflow/outflow The Hague office: new staff 6, leaving staff 45
- No volunteers were contracted at The Hague office in 2019
- Sick leave at The Hague office was 2.9 percent in 2019 versus 3.0 percent in 2018

Reorganization

Most of HRM’s work in 2019 was related to the reorganization. Preparatory work involved writing and finalizing the reorganization plan, applying the proportionality principle, development of a settlement agreement (in both Dutch and English), drafting of letters for more than 100 staff members, informing the unions, applying for a dismissal permit through the UWV, creation of a complaint committee and consultation with the Work’s Council. At the beginning of June every employee was informed of the impact on their position through a personal meeting.

During the second half of the year, KNCV said their goodbyes to all staff members that were made redundant. During the last quarter new settlement agreements were drafted and shared with our employees in the PMU who will be leaving the organization in the first quarter of 2020 after the final closure of Challenge TB.

Salary house

At the end of 2019 the Works Council gave their approval on the implementation of the new salary house per 31 December 2019. Letters were drafted informing the employees on the changes that would take place with regards to their salary scale and salary per 1 January 2020. Preparatory work was initiated to make the personnel and salary system ready for the changes in salary scales and salaries.

Performance System

The roll-out of the new performance appraisal system took place in the 1st quarter of this year at our head office. Several trainings were given at head office to train our staff on the ins and outs of the new performance appraisal system. The training was also given to our staff members in the field that were present during the home week.
The year 2019 marks the last year of implementation of the successful USAID-funded Challenge TB project, with a resulting overall decrease in income and activities for KNCV. Anticipating this decrease a reorganization was carried out in 2019, making the organization fit for a future with a lower funding level, but a more diversified funding base, focusing on KNCV’s areas of technical expertise. The period 2019-2021 is a transition period, in which some additional measures will be taken to adjust the organizations cost level to its new income level. An example is the move to a new office in May 2020. Financial plans show a surplus in the budget for 2021 onwards, with an income level ranging between 17 and 21 million.

The financial results for 2019 show a positive development. The income decreased compared to 2018, because of a decrease in income from government grants, related to the close out of the Challenge TB project.

KNCV Tuberculosis Foundation is pleased with the income from lotteries, which is only slightly lower than the level of 2018. The lottery contribution is invaluable as unearmarked funding in achieving our mission and goals.

Income from legacies is highly unpredictable and showed a decrease in 2019 compared to 2018, due to receipt of some larger legacies in 2018. Income from endowment funds decreased in 2019 and is at its normal level, after an additional grant in 2018 in support of the KNCV activities for the 49th Union World Conference on Lung Health. Income from other non-profit organizations increased again due to project Challenge TB. Income from investments increased due to positive stock market developments in 2019 (after the negative result in the last months of 2018), which resulted in an unrealized investment gain.

Total expenses in 2019 decreased to 64,1 million compared to 2018 (2018 93,3 million).

Expenses for TB control in low prevalence countries (mainly The Netherlands) have decreased compared to the level of 2018 and include, besides expenses for an annual project grant from the Ministry of health and for a grant from ZonMW, a contribution to ‘De gezonde generatie’, a project funded by Lotto (mainly The Netherlands) have decreased compared to 2018, related to the close out of Challenge TB. This drop in activities was partly compensated by new activities funded by Unitaid, Bill and Melinda Gates Foundation and others.

Expenses for research also decreased compared to 2018. Through the Challenge TB project KNCV is working on a large research project focused on Prevention, which is currently in its final year of implementation.

Expenses for education and awareness decreased in 2019 as was planned. Expenses for private fundraising decreased in 2019 because of a reduction of staff and lower campaign costs.

Expenses for administration and control are at the same level as last year.

A proposal for allocation of the result 2019 is presented on page 105.

**Financial data 2015-2019**

According to the 650 Guideline for annual reporting of charities and the requirements from the CBF a number of financial monitoring data is shown for a longer period in Table 1:

**Expenditures on the mission (R7)**

Compared to total expenses, since 2010, over 95% of KNCV’s budget is being spent on mission related activities. This indicator is closely monitored. Influences on the indicator can be due to (temporary) increases and decreases of expenditures for fundraising and for administration and control. Compared to last year the percentage decreased from 97,7% to 97,0%. Compared to the total income, expenditures on the mission (as a percentage) can differ from the previous indicator because in some years earmarked reserves and funds are used to cover the expenditures or there is a surplus occurring.

**KNCV’s policy for costs for fundraising (R8)**

With regards to expenditures for fundraising, KNCV Tuberculosis Foundation has the policy that, calculated as an average over a 3-year period, the costs cannot be higher than 25% of the income from own fundraising activities (individuals and companies). Because of our ambitions and modest position in the private fundraising market, we have chosen to stay close to the possible maximum. Uncertain and unpredictable factors in this strategy are the level of success of using new fundraising methods and the income from legacies. KNCV’s internal policy on level of costs for fundraising is that, if during a budget year, the results are not satisfactory, we adjust our budgets downwards to prevent a percentage above the 25% standard. Because of the unpredictability of legacy income the percentage fluctuates over the years. Because income in the R650 guideline is broken down in various income sources (individuals, companies, government, etc).
and other non-profit organizations) this percentage is now calculated based on income from individuals and companies only. Expenses in 2019 are 21.9% of the income from own fundraising activities from individuals and companies, below the 25% maximum. The 3-year average is 22.2%. The three-year average based on 2018, 2019 and the budget for 2020 is 25.6%. This is higher than 25% because the budgeted fundraising income for 2020 does not include income from sponsoring and company grants. This is a conservative estimate and we expect the percentage to decrease in actuals. In the past, this percentage was calculated as a percentage of all fundraising income.

KNCV’s policy for administration and control costs (R9)

The allocation of costs to the category ‘administration and control’ is done using the guideline and recommendations of Goede Doelen Nederland, published in January 2008. The CBF requires an organization to have an internal standard for this cost category. KNCV uses 2.5% of the total costs as a minimum and 5% as a maximum. The reasons for this range of percentages are:

- Our activities are funded by private, corporate and public donors, all of whom demand the highest level of transparency and accountability on what has been spent to the mission and the allocation to projects.
- We want to spend as much of our resources as possible in an efficient and effective manner to realize our mission. Smooth running of operations and adequate decision-making, management- and control processes contribute to that.
- On the one hand, the costs for these processes cannot be so high without taking resources away from the mission, and on the other hand, they should not be too low because then the quality of our management control cannot be guaranteed. We therefore use a minimum and a maximum standard.
- Regarding determining a range between the minimum and maximum, we must also consider the widely fluctuating levels of activities within projects and contracts, funded by institutional donors. In the realization of plans, the organization depends on the available resources and implementation pace of third parties. The level of management and administrative efforts required, do not immediately respond in an equal way and at an equal pace. For this reason, also, the average rate over a period of several years is presented.

The range has been adjusted downwards in 2015 from 5-10%, because the volume of activities has increased due to the five-year Challenge TB award, allowing for an overall percentage reduction. In 2019, the percentage of 1.8% is higher than 2018 and also higher than what was budgeted for 2019 (1.4%) due to reorganization costs. Now that the Challenge TB project is coming to an end and due to the decreased volume of activities from 2020 onwards the range will need to be reconsidered, keeping in mind the guidelines and recommendations of Goede Doelen Nederland.

Internal monitoring data

In addition to the guidelines issued by the CBF, we also monitor the progress of our activities using other indicators; both for our own internal management and for reporting to institutional donors These include:

- The number of project days realized compared to planned days; In 2019, a total number of 17,659 project days were planned and 14,365 were realized, which is 81% of the planned days. This is caused by the fact that some vacancies were not filled or filled later than planned and by the fact that most activities for Challenge TB ended in August 2019. In 2018, this this percentage was 88%. Income related to direct project days decreased due to less direct days.
- Indirect costs compared to direct personnel costs made in The Hague, as an internal method; All project days in total represent an amount in direct personnel costs. All other personnel costs and costs for facilities are accounted for as indirect costs. In 2019, the planned percentage of indirect costs on direct costs was 79.17%, and realized is 79.74%. The increase in 2019 compared to the budget is due to a lower number of direct days and costs related to the reorganization.
- Indirect costs compared to total direct costs, in compliance with the USAID rules for accounting; Although the methodology does not differ drastically from our internal methodology, some cost categories and personnel categories included in our internal method must be excluded as indirect costs in the USAID method. According to the USAID calculation the percentage for 2019 is 17.57%, while 15.78% was planned. In 2018, the percentage was 13.35%.

Our long-term aim is to be more cost-effective and show a decrease in the indirect cost rate percentages The results of our internal key performance data
show an increase in indirect cost rate, which was partly planned, but negatively affected by less direct project days and (incidental) reorganization costs.

**Budget 2020 and possible risks**

The full budget for 2020 is shown in the Statements of Income and Expenditure. The total income is budgeted on a consolidated level of € 16.8 million. Of that amount, € 2.7 million is compensation for implemented activities by coalition partners. The planned income is € 47.7 million lower than the actual for 2019. This is an average amount reached in past years, but this income is very difficult to estimate and the amount can be significantly higher or lower. The actual amount for 2019 was lower (€ 208.210).

- A large part of the budget is for project costs in countries. There is a risk that costs are identified as unallowable for donors by independent auditors in countries or by the independent auditor who executes the overall audit.
- The income from legacies is budgeted at € 47.7 million lower than the actual for 2019. This is an average amount reached in past years, but this income is very difficult to estimate and the amount can be significantly higher or lower. The actual amount for 2019 was lower (€ 208.210).

A contingency budget of € 140,000 has been included to deal with unexpected fall backs or to react to valuable opportunities.

In March 2020 the worldwide impact of the COVID-19 pandemic became clear. At this stage, the impact on our business and results is limited. We will continue to follow the various national institutes policies and advice and in parallel will do our utmost to continue our operations in the best and safest way possible without jeopardizing the health of our people. It is clear that many planned activities are delayed due to travel bans, lock outs in a number of countries and the immense pressure that the COVID-19 response will put on countries health care systems. This will affect project implementation. Governments in the countries in which we operate have also announced the implementation of government assistance measures which may mitigate the impact of the COVID-19 outbreak on our results and liquidity. The same applies to the Global Fund and other donors. We are currently investigating the extent to which we can apply for such funding in the countries in which we operate. However, the details of available arrangements and the period through which they remain available are unknown.

**Long-term financial plan**

An indication of a longer-term financial plan is depicted in Table 2.

A reduction of income and expenditures has now been taken into account from 2020 onwards, taking into account the end of the Challenge TB project and the effect on the continuity reserve.

</table>
Main fluctuations compared to the budget for 2019 are caused by the fact that activities for the Challenge TB project have ended in September 2019 for most countries and new projects showed a delay in implementation start. This is reflected in the lower office and general expenses, which includes expenses for in country activities like trainings and workshops. The contribution for Gezonde Generatie for 2019 was budgeted under Expenses share in fundraising with third parties under publicity and communication, but reported under TB Control in low prevalence countries and outsourced activities to better reflect the activity. Depreciation expenses were lower than budgeted due to lower and later investments than planned.

The ‘Koninklijke Nederlandse Centrale Vereniging tot bestrijding der Tuberculose’ with Chamber of commerce number 40408837 (KNCV, using the name KNCV Tuberculosis Foundation) resides at Benoordenhoutseweg 46 in The Hague, The Netherlands. Under its Articles of Association, KNCV Tuberculosis Foundation has as its statutory objective:

The promotion of the national and international control of Tuberculosis by, amongst other things:

a. Creating and maintaining links between the various institutions and people in the Netherlands and elsewhere in the world who are working to control tuberculosis;

b. Generating and sustaining a lively interest in controlling tuberculosis through the provision of written and verbal information, holding courses and by promoting scientific research relating to tuberculosis and the control of it;

c. Performing research in relation to controlling tuberculosis;

d. Providing advice on controlling tuberculosis, and
e. All other means which could be beneficial to the objective.

As a subsidiary activity, it may develop and support similar work in other fields of public health.

**General accounting policies**

The valuation principles and method of determining the result are the same as those used in the previous year, with the exception of the changes in accounting policies as set out below and in the relevant sections.

**Guideline 650**

The financial statements are drawn up in accordance with the Reporting Guideline for Fundraising Institutions, guideline 650.

**Valuation**

The general principle for the valuation of assets and liabilities, as well as the determination of results, is the historical purchase price. Unless otherwise stated, assets and liabilities are stated at the values at which they were acquired or incurred.

**Estimates**

In applying the principles and policies for drawing up the financial statements, the management of KNCV Tuberculosis Foundation makes different estimates and judgments that may be essential to the amounts disclosed in the financial statements. If it is necessary in order to provide the true and fair view required under Book 2, article 362, paragraph 1, the nature of these estimates and judgments, including related assumptions, is disclosed in the notes to the relevant financial statement item.

**Implications of COVID-19 on the organisation**

The accounting principles applied to the valuation of assets and liabilities and the determination of results in these financial statements are based on the assumption of continuity of the organisation.

**Description of the conditions, circumstances and developments resulting from COVID-19**

The outbreak of COVID-19 in 2020 and the resulting pandemic are having significant effects on economies globally. It also has an effect on the activities of KNCV. It is clear that many planned activities are delayed due to travel bans, lock outs in a number of countries and the immense pressure that the COVID-19 response will put on countries health care systems. This will affect project implementation. No doubt COVID-19 will affect health services worldwide, likely also negatively affecting services for TB patients in the short term. KNCV plans to mitigate against impact on TB services by contributing to Corona measures through sharing its expertise in areas such as infection control, contact investigation, laboratory capacity building, distance training, mobile and digital technologies, screening and surveillance. However, in the long term, health systems strengthening under Corona funding may benefit health systems and thus TB control. Governments in the countries in which we operate have also announced the implementation of...
The COVID-19 outbreak and resulting measures taken by various governments to contain the virus have affected our project implementation during the first four months of 2020. We have taken a number of measures to monitor and prevent the effects of the COVID-19 virus such as safety and health measures for our staff (like social distancing and working from home). In addition to these already known effects, the macroeconomic uncertainty causes disruption to economic activity and it is unknown what the longer term impact on our business may be. At this stage, the impact on our business and results is limited. We will continue to follow the various national institutes policies and advice and in parallel we do our utmost to continue our operations in the best and safest way possible without jeopardizing the health of our people. The scale and duration of this pandemic remain uncertain and might impact our future income level.

We assessed the current level of KNCV’s continuity reserves as well as our current cash position, which is deemed sufficient to cover our organizational expenses.

Closing

Thus, whilst uncertain, we do not believe, that the impact of the COVID-19 virus would have a material adverse effect on our financial condition or liquidity.

Translation of foreign currencies

Items included in the financial statements are measured using the currency of the primary economic environment in which KNCV Tuberculosis Foundation operates (the functional). The financial statements are presented in Euros as KNCV has its base of operations in The Hague, The Netherlands. Assets and liabilities in foreign currencies are translated at the official rates of exchange ruling at the balance sheet date. Non-monetary assets valued at fair value in a foreign currency are converted at the exchange rate on the date on which the fair value was determined. Transactions in foreign currencies are translated at the applicable exchange rate on the date of the transaction.

The resulting exchange differences are accounted for in the profit and loss account.

Currency exchange effects

KNCV works with multiple currencies on a daily basis. Income is realized in euro and US dollar, while our expenditures are largely in euro and several project country currencies. Balances held in other currencies than the euro or US dollar are as much as needed exchanged into US dollar. The majority of our income is in euro and in US dollar. Foreign currency needed in our project countries is as much as possible purchased centrally while balances are kept to a minimum. In 2019 KNCV did not use financial instruments to control currency risk on various foreign currencies.

Balance sheets of local KNCV representative offices

The balance sheets of KNCV representative offices are included in KNCV Tuberculosis Foundations’ balance sheet per asset/liability group against the exchange rates as at 31 December 2019. All legal entities that can be controlled, jointly controlled or significantly influenced are considered to be a related party. Also, entities which can control KNCV Tuberculosis Foundation are considered to be a related party. In addition, statutory directors, other key management staff of KNCV Tuberculosis Foundation and close relatives are regarded as related parties.

Transactions with related parties are disclosed in the notes insofar as they are not transacted under normal market conditions. The nature, extent and other information is disclosed if this is necessary in order to provide the required insight.

Accounting policies - assets and liabilities

Tangible fixed assets

The tangible fixed assets have been valued at historic acquisition prices less cumulative depreciation using the following depreciation rates:

- Office (re)construction 5 years
- Office inventory 5 years
- Computers 3,33 years

Allowance is made for any impairment losses expected at the balance sheet date. An assessment is made annually to see if additional depreciation of fixed assets is deemed necessary based on the actual value of the assets. Gains and losses from the occasional sale of property, plant or equipment are included in depreciation.

Receivables concerning projects

Receivables concerning projects consist of received advances in behalf of various international projects. Receivables are recognized initially at fair value and subsequently measured at amortized cost. If payment of the receivable is postponed under an extended payment deadline, fair value is measured on the basis of the discounted value of the expected revenues. Interest gains are recognized using the effective interest method. When a trade receivable is uncollectible, it is written off against the allowance account for trade receivables. The actual expenses are deducted from the advances.

Investments

With respect to investments, KNCV has setup an investment policy. The essence of the policy is to invest only when it concerns such an excess of liquidities that they cannot be used in the short-term for the main activities. As far as that is the case the derived objectives will be: risk avoiding investments and realizing as optimal as possible returns which will be durable for the duration. For that reason, KNCV is investing predominantly in bonds (2019 56,4%). The policy of the board will also be directed at hedging price risks by reserving unrealized exchange differences in the reserve ‘unrealized gains/losses on investments’. Shares which are held for trading are carried at fair value. Investments in bonds and bond funds are recognized as fair value. Unrealized capital gains will be accounted for in the reserve for ‘unrealized gains/losses on investments’.

Cash and banks

Cash and bank balances are freely disposable, unless stated otherwise, and are accounted for at nominal value.

KNCV does not have any significant concentrations of credit risk. For banks and financial institutions our goal is to only accept banks with a rating of ‘A’ or higher, however this is not always possible, due to local availability. Cash and bank amounts in countries are kept purposely low to limit the credit risk. There is no concentration risk as this is divided over multiple different banks in multiple countries.

Liabilities concerning projects

Liabilities concerning projects consist of paid advances in behalf of various international projects. On initial recognition current liabilities are recognized at fair value. After initial recognition current liabilities are recognized at the amortized cost price, being the amount received, taking into account premiums or discounts, less transaction costs. This usually is the nominal value.

Coalition activities

In the annual accounts, all receivables and liabilities concerning the USAID program have been fully included, including those sub-agreed to coalition partners. The receivables represent the amount obligated to the coalition on both contracts minus the amounts already received. The liabilities represent the part of the obligation that still needs to be executed. This liability is shown separately for KNCV and other coalition partners.

Accounting policies – Statement of Income and Expenditure

Allocation to accounting year

The result is the difference between the realizable value of the services provided and the costs and other charges during the year. The results on transactions are recognized in the year in which they are realized.

Income from individuals and companies

Income from individuals and companies is recognized as income in the financial year the income or in-kind contribution is received.

Income from services

Income from services is recognized under the percentage-of-completion method based on the services performed to the balance sheet date as a percentage of the total services to be performed and based on actual costs incurred and time spent.

We have taken a number of measures to monitor and prevent the effects of the COVID-19 virus such as safety and health measures for our staff
Legacies and endowments
Benefits from legacies and endowments are included in the financial year the legacy is announced, at 75% of the value calculated by the external clearing agency. This 75% is applied to all categories of legacies and does not distinguish between cash, investments and real estate. The remaining balance, which can be influenced by fluctuations in value of houses and investments, is included in the financial year of receipt.

Grants
Subsidies are recorded as income in the income statement in the year in which the subsidized costs were incurred or income was lost or when there was a subsidized operating deficit.

Coalition activities
In the annual accounts, all income and expenses concerning Challenge TB have been included, including the part sub-agreed to coalition partners, as KNCV is end responsible for the implementation of these activities.

Share in fundraising third parties
The contributions from lotteries will be included in the financial year in which they are received or committed.

Income and expenses per project
Income and expenses concerning projects are allocated to the periods to which they relate and in which they can be accounted for as declarable to a donor, if the amount can be determined reliably. This also counts for purchased materials and equipment which are accounted for as expenses in the period in which they are acquired.

Interest income
Interest income and expenses are recognized on a pro rata basis, taking account of the effective interest rate of the assets and liabilities to which they relate.

Salaries & Wages
Salaries, wages and social security contributions are charged to the income statement based on the terms of employment, where they are due to employees and the tax authorities respectively.

Pension contribution
KNCV Tuberculosis Foundation’s pension scheme qualifies as a defined benefit plan. The defined benefits are based on an average pay system. The pension scheme has been effectuated with the sector pension fund for health care (PFZW).

Under RJ 271.3 the liability or asset recognized in the balance sheet in respect of defined benefit pension plans represents the actual pension liability or receivable towards the pension fund or third-party pension insurance company. The pension expense in the profit and loss account represents the premiums paid during the year. In addition to the premium payments, there are no other obligations.

The pension fund’s coverage grade ultimo 2019 was 99.2%, which is an improvement compared to 2018. In their action plan “Actuariële en Bedrijfstechnische Nota 2017” the pension fund describes mitigating measures to avoid deficits.

Pension premiums compared to the previous year remained unchanged at 24.4% for retirement. The percentage for disability remained at a level of 0.4%.

Prepaid contributions are recognized as deferred assets if these lead to a refund or reduction of future payments. Contributions that are due but have not yet been paid are presented as liabilities. For foreign pension schemes which are not similar to the way the Dutch pension system is designed and operates, a best estimate is made of the obligation as at the balance sheet date. Monthly contributions are paid out to the employees for them to contribute to their pension scheme.

Operational lease
The company may have lease contracts whereby a large part of the risks and rewards associated with ownership are not for the benefit of nor incurred by the company. The lease contracts are recognized as operational leasing. Lease payments are recorded on a straight-line basis, taking into account reimbursements received from the lessor, in the income statement for the duration of the contract.

Depreciation fixed assets
Depreciation on fixed assets is calculated at fixed percentages of cost or actual value, based on the estimated useful life of the assets.

Allocation expenditure
All expenditure is allocated to three main categories ‘objectives (main activities)’, ‘raising income’ and ‘administration and control’. Furthermore, expenditure is allocated to organizational units, which activities can be matched to the three main categories. When units are active or supportive for other units the expenses will be internally charged based on internal keys. The table below shows which category fits with the specific organizational unit and the key for the internal charge. The percentages of staff expenses are estimations based on experience or based on actual time writing.
Organizational unit | Charge argument
--- | ---
Netherlands, low prevalence | All expenses charged on ‘TB control in low prevalence countries’
Other countries, high prevalence | 3% of staff expenses charged on ‘Expenses government grants’
Project management | 3% of staff expenses charged on ‘Expenses government grants’
Research | 3% of staff expenses charged on ‘Expenses government grants’
Communication | All expenses charged on ‘Information, education and awareness’
Fundraising | Actual expenses charged on ‘Expenses actions from third parties’
| Staff expenses charged on ‘Information, education and awareness’ and ‘Expenses private fundraising’ based on timewriting.
| 40% of all other expenses charged on ‘Information, education and awareness’
| 60% of all other expenses charged on ‘Expenses private fundraising’
Directors office | Grants to third parties for scientific research charged on ‘Research’
| Expenses for public affairs charged on ‘Information, education and awareness’
| 2% of staff expenses charged on ‘Expenses fundraising third parties’
| 3% of staff expenses charged on ‘Expenses government grants’
| 3% of staff expenses charged on ‘Expenses financial assets’
| All other expenses charged on ‘Expenses administration and control’
Human resource management | Based on amount of FTE of units charged on four objective-categories, expenses private fundraising and expenses administration and control
Facility management | Based on amount of FTE of units charged on four objective-categories, expenses private fundraising and expenses administration and control
Finance Planning & Control | Staff exclusively working for project finance is charged to the objective-categories
| All other expenses charged on ‘Expenses administration and control’

Materials used for supporting the fundraising message (for examples letters to donors, newsletters) contain also information about the disease tuberculosis and tuberculosis control. The percentage of expenses from fundraising that is charged on ‘Information, education and awareness’ is determined by a prudent estimate of the amount of information supplied in all materials.

**Accounting policies – cash flow statement**
The cash flow statement is determined using the indirect method, presenting the cash flow separately as the sum of the shortage or surplus and the costs for depreciation.

Cash flows in foreign currencies are included using an average exchange rate. Currency fluctuations and income and expenses from interest are added to the cash flow from operational activities. Interest paid and received, dividends received and income taxes are included in cash from operating activities. Under investments (in property, plant and equipment) only those investments are included which were paid for in 2019.
NOTES TO THE FINANCIAL STATEMENT

Guideline 650 for accounting and reporting

KNCV Tuberculosis Foundation is subject to the 650 Guideline for Annual Reporting by Fundraising organizations. In the following notes the composition of the Balance Sheet is analyzed and commented. Furthermore, significant deviations between the 2019 results and budget and between 2019 and 2018 as shown in the Statement of Income and Expenses are clarified.

KNCV Tuberculosis Foundation is the prime contractor of the United States Agency for International Development (USAID) funded Challenge TB project, which runs from 30 September 2014 up to 31 March 2020, including a no cost extension for a six-month period for limited activities and countries. The project is partly implemented by partners in the Tuberculosis Coalition for Technical Assistance (TBCTA). These implementation parts, the consequential current account positions and the contractual commitments towards the donor are considered in both the balance sheet and the statement of income and expenses of KNCV Tuberculosis Foundation. At the de-central level, where KNCV has a regional office and country offices, subaccounts are maintained for all local financial transactions. The subaccounts are fully included in both the balance sheet and the profit & loss statement.

The book value of fixed assets ultimo 2019 amounts to € 172,627, which is lower than 2018. All fixed assets are used for operational management of the organization, such as office inventory, office reconstructions and ICT equipment. Investments in new fixed assets for 2019 amounting to € 30,703 were mainly for ICT equipment. Total depreciation is calculated at € 185,347. Assets that are no longer in use have been divested for an amount of € 419,609. The part of their book value that was not depreciated yet is included in the depreciation for 2019. This includes an amount of € 18,803 for office reconstruction in the current offices due to the announced move to new offices in May 2020.

Tangible fixed assets are those assets needed to operationally manage the business. No assets have been included in the tangible fixed assets figures that have been directly used in the scope of the main activities.

Accounts Receivable (B2)
The balance of accounts to be received is € 7,3 million, which is € 25,2 million lower than in 2018. The bulk of the receivables amount consists of current account balances with projects, accounts receivables from donors, and the financial contractual relation with coalition partners. Overall, the annual level of activities executed influences this balance significantly. Acquiring more or less grants from institutional donors can lead to a structural and significant decrease or increase of the amount.

</table>

The total account receivable from USAID for the Challenge TB project, based on approved project work plans, decreased from € 29,0 million to € 4,2 million. This amount is directly related to the work still to be performed for the Challenge TB project amounts under liabilities (B7). The receivable will be reimbursed based on implemented activities. The fair value approximates the book value. The receivables include an amount of € 0 in receivables that fall due in more than one year.

Investments (B3)
KNCV Tuberculosis Foundation follows a defensive investment risk profile. 70% fixed income securities (country bonds or bonds with at least an A-rating), 20% shares (in participatory funds or in high value equity) and 10% real estate and alternatives. Management of the portfolio is outsourced to ABN AMRO.

KNCV’s objective is to optimize the return on investments, considering that:
- The risk of revaluation must be minimized and a sustainable result must be achieved by spreading tactics (allocation, time planning) and careful selection of new investments;
- Consistency in growth and composition of the portfolio, i.e. no significant fluctuations over time;
- Leading to a predictable cash flow, which supports the annual budget of the organization without being too dependent on its results;
- Maintaining the long-term value of the investment, i.e. the value of invested assets must keep pace with the evolution of inflation;
- The influence on the whole portfolio of yield reduction of individual segments is limited;
- For investments in equities and corporate bonds, ABN AMRO selects investment funds that employ a disciplined and well-defined sustainability screening process. This process must address the major topics that fall under the Environmental, Social and Governance themes. Topics to be addressed must include:
  - Business ethics;
  - Environment;
  - Employees;
  - Society & community;
  - Clients & competitors;
  - Supply chain management and Corporate governance.

STATEMENT OF INCOME AND EXPENSES

The financial presentation is based on the following main assumptions:

- The risk of revaluation must be minimized and a sustainable result must be achieved by spreading tactics (allocation, time planning) and careful selection of new investments;
- The balance sheet is presented on a going concern basis.
- The receivables are fully included in both the balance sheet and the income statement.
- The book value of fixed assets is calculated at € 172,627, which is lower than 2018. All fixed assets are used for operational management of the organization, such as office inventory, office reconstructions and ICT equipment. Investments in new fixed assets for 2019 amounting to € 30,703 were mainly for ICT equipment. Total depreciation is calculated at € 185,347. Assets that are no longer in use have been divested for an amount of € 419,609. The part of their book value that was not depreciated yet is included in the depreciation for 2019. This includes an amount of € 18,803 for office reconstruction in the current offices due to the announced move to new offices in May 2020.

</table>
Controversial activities to be addressed are:
- Animal welfare;
- Factory farming;
- Animal testing and;
- GMOs.

Controversial products to be addressed are:
- Nuclear energy (production and services);
- Weapons;
- Tobacco;
- Alcohol;
- Adult entertainment;
- Addictive forms of gambling and;
- Fur & specially leather products.

ABN AMRO will not invest in funds that invest in companies that have a strategic involvement in the following products or services:
- Tobacco;
- Weapons production (including specifically designed components);
- Pornography;
- Mining;
- Controversial ways to gain energy such as drilling in arctic, shale gas extraction and oil extraction from tar sands;
- Addictive forms of gambling or;
- Production or processing of fur and specialty leather.

For investments in government bonds, ABN AMRO will only invest in bonds issued by governments that have an above-average sustainability score.

Sustainability of a country is based on its score on some 30 criteria, such as: CO2 emissions and reduction targets, production of renewable energy, biodiversity, education, income distribution, quality of life, child labor, civil liberties, defense spending, corruption, effectiveness of government, and adherence to major international treaties.

ABN AMRO will not invest in government bonds of countries that seriously curtail press freedom, infringe on civil liberties, practice the death penalty, possess no democratic elections, or have an above-average corruption, effectiveness of government, and adherence to major international treaties.

The performance of ABN AMRO as an administrator of the portfolio is assessed by the Audit Committee of the Board of Trustees annually and on a more frequent basis by the Executive Director and the Director Finance. The bank is instructed to take decisions for selling and buying within the limits of KNCV's investment and treasury policy.

The composition and results of the portfolio is described below and depicted in Tables 3 to 6. As far as is relevant with comparison with 2018 is shown.

To determine the maximum level of investments, the level of the existing reserves and funds is used as a guiding target. In principle, 10% of total reserves are kept as liquidity, which leads to a maximum available level of investments of 90%. Calculations based on this principle show that as per 1 January 2019, € 10,3 million was available and as per 1 January 2020, € 10,1 million. The market value (€ 5.9 million) of the investments are below the maximum. Naturally, apart from this mathematical approach, an assessment of the situation on the market is also considered when transactions take place.

In Table 4 the allocation of assets according to the reporting of ABN AMRO is shown. Part of the bank balance is attached to the investment portfolio and is considered in the reporting of ABN AMRO. All asset categories stay within the range allowed according to the investment policy.

Calculations based on this principle show that as per 1 January 2019, € 10,1 million was available and as per 1 January 2020, € 10,3 million was available. The range allowed according to the investment policy.
Bonds are mostly consisting of an investment in a bond portfolio fund (SSGA) and from Northern European national governments and from national financial institutions. Shares and real estate funds are all tested against sustainability criteria with underlying values in European and worldwide operating companies. In principle, bonds are bought with a long-term investment horizon. The remaining running period is categorized in Table 5. Because of the low return on bonds in the current market and expected interest increases that could result in negative returns bonds are underweight and a larger proportion of the portfolio is kept in stocks and as cash.

An overall result of 8.33% (benchmark: 8.78%; 2018: -2.83%) is realized. Below, a comparison between our 2019 portfolio, the benchmark and the results for 2018 is shown per asset category:
- Bonds; 2019 3.74%, benchmark 3.15%; 2018 -0.87%
- Shares; 2019 29.8%, benchmark 27.54%; 2018 -9.04%

- - - - - -

In absolute terms and in comparison with the long-term expected result of 5% the portfolio overperformed. Compared to the benchmark it underperformed, mostly due to the allocation of investment expenses. The overweighing of the IT sector contributed positively to the result as well as the underweighting of the US. Bonds showed a slightly higher result compared to the benchmark due to overweighing in corporate bonds.

In Table 6 and Figure 10, as required by the sector organization for charities, Goede Doelen Nederland, the investment results over a 5-year period are depicted. The figure also shows the accumulated result over the years.

### Table 10: Net investment income 2014-2019

The Executive Director confirms that all transactions in 2019 have been executed in compliance with the Investment Policy. This has been monitored by analyzing the monthly and quarterly reports of the investment bank and by discussing the results during periodical meetings.

### Conclusion

The balance of cash and banks decreased compared to 2018, with € 4.0 million to a level of € 10.7 million. Main reason is the lower cash balances for Challenge TB. Ultimo 2019 no deposits were available, because interest rates on deposits during 2019 were still not more beneficiary to the result than balances on savings accounts.

### BALANCE SHEET PER 31 DECEMBER 2019 - LIABILITIES

#### Reserves and funds

- **Continuity reserve**
  - Continuity reserve serves as a buffer for unexpected fall backs, both in expenditures and in income.
  - The objective of the reserve is to guarantee the continuity of the activities, while having enough time to take measures to adjust the organizational structure, and volume, to fluctuations in the volume of mission related activities.
  - For this continuity demand, the Board has not earmarked the reserve with a specific spending destination.
  - We use 1 to 1.5 times the estimated and budgeted expenditures for the organization for one year as a reasonable maximum level of the reserve.
  - Mission related activity expenditures are excluded of the calculation.
  - Based on the budget for 2020 for organizational costs (€ 7.6 million) the continuity reserve's maximum is € 7.6 to € 11.4 million. The reserve ultimo 2019, € 8.6 million, stays well within the maximum (1.4 times the budget for organizational costs in 2020). The underlying risks to be covered by the continuity reserve are analyzed each year during the annual planning and budgeting process. At that point, possible risks are identified and, if possible, quantified to calculate the maximum amount needed in the continuity reserve. It is expected that the consequences of a reduction in income and activities due to the close operation of Challenge TB the risk of discontinuity of the activities.

### KNCV Tuberculosis Foundation's policy towards reserves and funds is clarified in chapter Accounting policies.

### NOTES TO THE FINANCIAL STATEMENT

- Continuity reserve is not included in the balance.

### NOTES TO THE FINANCIAL STATEMENT
NOTES TO THE FINANCIAL STATEMENT

of (parts of) the organization and long-term commitments can be covered by the current level of the continuity reserve.

- Earmarked project reserves
Some parts of our equity have been earmarked by the Board to several specific objectives, with approval of the Board of Trustees. This gives the organization the possibility to either anticipate on unexpected opportunities or to give extra focus to strategic areas. In the coming years, parts of the reserves will be used for extra research activities in Nigeria and Ethiopia. In 2019, an amount of € 79.311 has been withdrawn from the earmarked project reserves for approved activities. The budget had an amount of € 852.100 planned to be deducted from the earmarked reserves. Due to prioritization of Challenge TB activities the actual deduction was lower. For 2020 € 250.000 is budgeted to be used.

The reserves for policy planning and capacity building are intended for international projects that have a policy development and research component. The special needs reserve is intended for patient support. The reserve for monitoring tools is intended for investment in improving monitoring tools. The advocacy reserve is allocated for advocacy and awareness creation. The reserve for an educational center is intended for patient support. The reserve for extra research activities is intended for investment.

- Decentralization reserve
The Decentralization Reserve is the portion of reserves which is dedicated by the Board of Trustees to serve as a buffer for expenses related to the planned decentralization of organizational tasks, focusing on decentralized resource mobilization through implementation of pilot projects. In 2019, the decentralization reserve was allocated towards expenses to be incurred for the capacity building of country office staff. In 2019, the amount of € 165.715 was withdrawn from this reserve. For 2020, an amount of € 250.000 is planned to be withdrawn.

- Reserve unrealized results on investments
This reserve serves as a revolving fund for unrealized results on investments, which are not available for mission related activities until they are realized. In compliance with Guideline 650, unrealized results are accounted for in the Statement of Income and Expenditure and are therefore part of the surplus or deficit in the annual accounts. Ultimo 2019 the reserve contains € 516.035, which is a significant increase from 2018, due to unrealized positive stock exchange results at the end of 2019. The movement in the reserve is as follows:

<table>
<thead>
<tr>
<th>TOTAL REVALUATION RESERVE</th>

<tr>
<td>Total earmarked by the board</td>
<td>1.214.343</td>
<td>-</td>
<td>-</td>
<td>-</td>
<td>1.135.032</td>
</tr>
</tbody>
</table>

- Fixed Assets reserve
KNCV Tuberculosis Foundation separates equity, needed to finance the remaining value of fixed assets, which is allowed by Guideline 650. In 2019, the reserve decreased to an amount of € 172.627.

NOTES TO THE FINANCIAL STATEMENT

Funds (B6)
In the past, some resources received from third parties have not been used in full and still have a spending purpose earmarked. In the coming years, parts of these funds will be used for international and research activities. Most of the funds do not have spending deadlines. Use of the funds is budgeted according to the activity plans. In 2019, an amount of € 12.350 is used.

Fund Tuberculosis Surveillance and Research Unit (TSRU)
In 1993, the financial management of the TSRU was transferred to KNCV Tuberculosis Foundation, as one of the members of the TSRU. KNCV Tuberculosis Foundation henceforth became responsible for the funds transferred to it, its corresponding financial management and reporting to the steering Committee of the TSRU. The utilization of these funds has no time limit. The withdrawal in 2019 of € 12.350 is the costs related to the annual conference.

Fund special needs
This fund was established from the funds arising out of the “De Bredeweg” foundation that was dissolved in 1979, and subsequent related additions. All rights and responsibilities to these funds were given to KNCV Tuberculosis Foundation and may only be utilized for the continuation of the dissolved foundation’s work. The utilization of these funds has no time limit. Should the KNCV earmarked reserve special needs under earmarked project reserves run out of funds this Fund special needs can be utilized for that purpose.

Jacob and Carolina Fund
By way of farewell gift, departing Board of Trustees’ chair Dina Boonstra, has created a fund under the umbrella of KNCV Tuberculosis Foundation, the Jakob & Carolina Fund. This was announced during the General Assembly 2017. The fund will support the training of people who give support to TB patients during their lengthy and difficult treatment. There were no activities in 2019 in anticipation of new project proposals in 2020.

Wessel
This fund relates to commitments taken over from Wessel Foundation, dissolved in 2019. All rights and responsibilities to these funds were given to KNCV Tuberculosis Foundation to be utilized for the continuation of the dissolved foundation’s work.

Various short-term liabilities (B7)
The total of various liabilties has decreased from € 408.8 million in 2018 to € 11.6 million in 2019 and includes Under Other liabilities € 1.7 million of contractual committed projects still to be executed for USAID and € 2.9 million value of sub-agreements with coalition partners. As clarified on the Accounts receivable side, the level of projects and activities agreed in grants is the man cause for fluctuation in the liabilities. The liability will be paid out based on implemented activities. The liability to other donors is related to advances received during 2019 for activities to be implemented in 2020. The fair value approximates the book value. A large part of Other Liabilities and Accrued Expenses is taken up by a provision for leave hours, which have not been used by employees up to now. The level of the amount for this provision at the end of 2019 is € 291.975, which is lower than the amount in 2018, because non statutory leave from 2014 cancelled at the end of 2019 and leave for staff that left as a result of the reorganization was either taken or paid out. The other liabilties also include an amount of € 585.181 that has been accrued out of prudence for indirect costs yet to be approved by USAID for reorganization costs.
All current liabilities fall due in less than one year. The fair value of the current liabilities approximates the book value due to their short-term character.

Liabilities not included in the balance sheet

Office rental contract
In 2015 a rental contract was signed by KNCV Tuberculosis Foundation with a third-party lessor for offices on Bovenhoutseweg 46 in the Hague (Van Bylandthuis). The rental contract is for 5 years, ending on 31 May 2020. The annual rent is € 265,363 including maintenance fee and VAT. A € 62,092 bank guarantee has been issued in favor of the lessor. The rent agreement has been terminated per 31 May 2020. In 2019 a rental contract was entered into with a third-party lessor for offices on Maanweg 174 in The Hague (Van Bylandthuis). The rental contract is for 6 years, ending on 31 May 2026. The annual rent is € 246,445 including maintenance fee and VAT. A € 62,092 bank guarantee has been issued in favor of the lessor.

The obligations from operational leases at the end of the reporting period can be specified as follows: (x € 1,000)

Obligations to pay:
No later than 1 year 166,409
Later than 1 year and no later than 5 years 420,473
Later than 5 years 93,438

During the reporting period the following amounts are included in the income statement with respect to leases:

(x € 1,000)

Minimum lease payments 261,713
Conditional lease payments 0

Conditional commitments Challenge TB
On 30 September 2014 KNCV Tuberculosis Foundation signed a cooperative agreement with USAID for a five-year program with a ceiling of US$ 524,754,500 and a cost share of US$ 36,732,815. Until 31 December 2019 the declared cost share is US$ 56,1 mio, which exceeds the commitment made. In 2019 the agreement was extended with a no cost extension until 31 March 2020. The audit according to the USAID guidelines of the 5th year of Challenge TB still has to be conducted. As a consequence, the indemnities of the related project expenditures have not been finalized. Their costs and revenues are accounted for in the profit and loss statement for 2019. For this uncertainty, which is based on currently known data, the financial impact cannot be estimated.

DGIS

On 29 January 2014 KNCV Tuberculosis Foundation received a 5-year grant from DGIS (Dutch Ministry of foreign affairs) of EUR 7,500,000 as cost share towards the USAID Challenge TB award:

Multi-year contracts

In 2019 we entered into several multi-year contracts with institutional donors, including:

A grant agreement for US$ 1,677,379 with Bill and Melinda Gates Foundation for the period May 2019 to May 2021;
A grant agreement with Unitaid for US$ 13,998,007 for the period July 2019 to December 2022;
A grant agreement with WHoD for US$ 638,238 for the period 2019;

<td>-</td>
<td>471,307</td>
<td>562,199</td>
<td>562,199</td>
</tr>
</tbody>
</table>

Income from companies decreased compared to 2018 due to an in-kind contribution from Sanofi and Glagen for a prevention study, represented under sponsoring in 2018 and not in 2019. Because there was no agreement on a contract for Cepheid 2020 at the time the budget was drafted, no budget has been included for 2020. A new contract has now been agreed for 2020.
Income from non-profit organizations includes the annual contribution to KNCV’s activities. This is a decrease compared to 2018, because of an additional contribution in 2018 for the Union world conference on lung health in The Hague, for which KNCV and the city of The Hague were co-hosts.

### Table 10: Income from lotteries (R3)

<td>1.300.000</td>
<td>1.381.209</td>
<td>-5.6%</td>
<td>-5.5%</td>
</tr>
</tbody>
</table>

Due to the fact that each year at the time of the closing date, the contribution from The Nederlandse Loterij is not yet announced and is therefore based on an estimate. Deviations from this estimate are accounted for as settlements from previous years. Income from the lotteries is recognized at the time of the allocation. The proceeds from the lotteries are based on multi-year contracts. 90% of the contribution from The Nederlandse Loterij is paid to Samenwerkende Gezondheidsfondsen for project “Gezonde Generatie” as part of a three-year agreement.

KNCV’s 2019 share in the USAID-funded Challenge TB project, with € 52.5 million, amounts to 91% of the total figure for government grants. The DGIS income for 2019 was € 0.45 million in 2019. In 2019 this included a project subsidy for the biannual Wolfheze conference, which explains the increase. From a large group of other government donors, a total of € 1.9 million was received, which is lower than the budgeted amount, due to delays in the implementation of some projects. For 2019, government grants determined 91% of KNCV’s budget.

</tbody>
</table>

Income from other non-profit organizations increased compared to 2018 and includes contributions from Bill and Melinda Gates Foundation, Unitaid and TB Alliance. Income from other non-profit organizations is an increasingly important part of KNCV’s funding base, important to achieve our long term goal of diversification of funding sources.

Other income decreased due to lower income from TSRU members.
5) This specification is based on the method KNCV Tuberculosis Foundation applies for costs to donor projects and contracts to be allocated, what is needed for internal management and external accountability project. To reconcile with the allocation to the four main objectives as reported in the format of Guideline 650 for annual reporting of fundraising organizations a separate line is included. The Challenge TB Coalition partner expenses are lower than planned due to the fact that the requested no cost extension which was included in the budget 2019 was not approved for all countries and partners.

Main fluctuations compared to the budget for 2019 are caused by the fact that activities for the Challenge TB project have decreased in 2019, which was budgeted to continue until the end of 2019. This is reflected in the lower office and general expenses, which includes expenses for in country activities like trainings and workshops.
The audit expenses charged by PricewaterhouseCoopers can be broken down in various categories:

<table>
<thead>
<tr>

This includes Namibia and Malawi. All other project audit costs are charged by local US approved auditors. Audit costs are charged to the year to which they relate. Project audit costs, when allowable under donor conditions, are reported under expenses to mission related goals.

Net investment income

With the investment portfolio and interest on bank balances we earned an amount of € 0.27 million as realized income and made a profit of € 0.33 million as unrealized exchange differences. The exchange differences were not budgeted for, which explains the difference with the budget. In 2018, the unrealized exchange differences were a loss of € 0.37 million. The increase in total investment income compared to 2018 is caused by the positive stock market developments in 2019.

</tbody>
</table>

In line with the guideline 650 investment income is presented after deduction of investment costs.

Operating result

The balance between income and costs is a deficit of € 0.16 million, while a deficit of € 2.59 million was planned. The main causes of the difference with the budgeted figures are incidental: lower income from reserves and lower organizational costs. Also, a contingency amount in the budget of € 0.2 million for unexpected unrecoverable costs was not needed. A proposal for appropriation of the result is presented as part of the annual report, on page 105.

Cash flow statement

The decrease in cash and banks in 2019 is caused by a positive cash flow from income and expenses and a negative cash flow resulting from the decrease in project liabilities compared to project receivables. This is caused by the fact that less funds are kept as buffer for project activities and project funding, but also positive exchange rate differences, positive investment income, less expenditures on projects funded from earmarked reserves and lower organizational costs. Also, a

No loans, advances nor guarantees are issued to members of the Executive Board or members of the Board of Trustees. The members of the latter are only reimbursed for expenses made.

Notes on the remuneration of the management

The Board of Trustees has, upon the recommendation of the Remuneration Committee, determined the amount of the management remuneration and additional benefits to be paid to management. The remuneration policy is regularly reviewed, most recently in September 2017. In determining the remuneration policy and remuneration, KNCV Tuberculosis Foundation adheres to Goede Doelen Nederland’s advisory scheme for the remuneration of the management of charitable organizations ("Adviesregeling Beloning Directeuren van Goede Doelen").

Under the advisory scheme, a maximum annual remuneration is determined on the basis of weighted criteria. At KNCV Tuberculosis Foundation, this weighting was performed by the Remuneration Committee. This resulted in a so-called basic score for management positions ("Basis Score voor Directeurenfuncties" - BSD) of 580 points (J) and a maximum annual remuneration of 100% of € for 1 FTE in 12 months for the statutory director.

In 2019, the actual incomes of management for the purposes of assessment of compliance with Goede Doelen Nederland’s maximum annual remuneration were as follows:

- K. van Weerenbeek € 150,789 (1 FTE/ 12 months)
- The Executive Director is contracted for a 40-hour workweek.

The annual income for the Executive Director is within the limit of € 156,754/12 months according to the Remuneration Committee. This resulted in a so-called basic score for management positions ("Basis Score voor Directeurenfuncties" - BSD) of 580 points (J) and a maximum annual remuneration of 100% of € for 1 FTE in 12 months for the statutory director. In 2019, the actual incomes of management for the purposes of assessment of compliance with Goede Doelen Nederland’s maximum annual remuneration were as follows:

- K. van Weerenbeek € 150,789 (1 FTE/ 12 months)
- The Executive Director is contracted for a 40-hour workweek.

In the financial statements, the size and composition of the management remuneration is reported in the notes to the statement of operating income and expenditure. Besides the annual income, management remuneration also includes the national insurance and pension contributions and, if applicable, any severance payments upon termination of employment.
EVENTS OCCURRING AFTER THE BALANCE SHEET DATE

There have been no material post balance sheet events that would require adjustments to KNCV Tuberculosis Foundation’s Financial Statements per 31 December 2019.

In February it was announced that by May 1st, Executive Director Kitty van Weezenbeek, will leave the organization to take a position with WHO Headquarters in Geneva. The Board of Trustees, in consultation with the Management Team, has appointed Dr Mustapha Gidado (MD, PhD) as acting Executive Director pending the recruitment of a new executive Director. Dr Gidado brings 17 years of public health and TB expert experience, of which 6 years working with the KNCV organization, both at country and Headquarters level. All measures were taken to facilitate an adequate and timely transfer of responsibilities to Dr Gidado in order to ensure continuity of executive functions. In March 2020 the worldwide impact of the COVID-19 pandemic became clear. Measures taken by various governments to contain the virus have affected economic activity. We have taken a number of measures to monitor and prevent the effects of the COVID-19 virus such as safety and health measures for our staff (like social distancing and working from home).

At this stage, the impact on our business and results is limited. We will continue to follow the various national institutes policies and advice and in parallel will do our utmost to continue our operations in the best and safest way possible without jeopardizing the health of our people. We also refer to measures taken to warrant going concern as described in the section Accounting Policies (p. 88).

Mirella Visser

Executive Director

Other information
According to article 17 of the articles of association the approval of the annual accounts and the annual report, including result appropriation, will take place during the general members meeting.
Independent auditor's report

To: the General Assembly and the board of trustees of Koninklijke Nederlandse Centrale Vereniging tot Bestrijding der Tuberculose (KNCV) (hereafter: KNCV Tuberculosis Foundation)

Report on the financial statements 2019

Our opinion

In our opinion, the financial statements of KNCV Tuberculosis Foundation ('the Foundation') give a true and fair view of the financial position of the Foundation as at 31 December 2019, and of its result for the year then ended in accordance with the Guideline for annual reporting 650 'Charity organisations' of the Dutch Accounting Standards Board.

What we have audited

We have audited the accompanying financial statements 2019 of KNCV Tuberculosis Foundation.

The financial statements comprise:
- the balance sheet as at 31 December 2019;
- the statement of income and expenditure for the year then ended; and
- the notes, comprising the accounting policies and other explanatory information.

The financial reporting framework applied in the preparation of the financial statements is the Guideline for annual reporting 650 'Charity organisations' of the Dutch Accounting Standards Board.

The basis for our opinion

We conducted our audit in accordance with Dutch law, including the Dutch Standards on Auditing. We have further described our responsibilities under those standards in the section 'Our responsibilities for the audit of the financial statements' of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Independence

We are independent of KNCV Tuberculosis Foundation in accordance with the 'Verordening inzake de onafhankelijkheid van accountants bij assuranceopdrachten' (ViO, Code of Ethics for Professional Accountants, a regulation with respect to independence) and other relevant independence requirements in the Netherlands. Furthermore, we have complied with the 'Verordening gedrags- en beroepspregels accountants' (VGBA, Dutch Code of Ethics).

PricewaterhouseCoopers Accountants N.V., Thomas R. Malthusstraat 5, 1066 JR Amsterdam, the Netherlands

T: +31 (0) 88 792 00 20, F: +31 (0) 88 792 96 40, www.pwc.nl

Emphasis of matter - uncertainty related to the effects of the coronavirus (COVID-19)

We draw attention to the note "Accounting policies - Implications of COVID-19 on the organisation" in the financial statements in which management has described the possible impact and consequences of the coronavirus (COVID-19) on the Foundation and the environment in which the foundation operates as well as the measures taken and planned to deal with these events or circumstances. This note also indicates that uncertainties remain and that currently it is not reasonably possible to estimate the future impact. Our opinion is not modified in respect of this matter.

Report on the other information included in the annual report

In addition to the financial statements and our auditor's report thereon, the annual report contains other information that consists of:
- board report;
- other information;
- policy bodies in which KNCV was active in 2019;
- KNCV partners 2019;
- abbreviations.

Based on the procedures performed as set out below, we conclude that the other information:
- is consistent with the financial statements and does not contain material misstatements;
- contains the information that is required by the Guideline for annual reporting 650 'Charity organisations' of the Dutch Accounting Standards Board.

We have read the other information. Based on our knowledge and understanding obtained in our audit of the financial statements or otherwise, we have considered whether the other information contains material misstatements.

By performing our procedures, we comply with the requirements of the Dutch Standard 720. The scope of such procedures was substantially less than the scope of those performed in our audit of the financial statements.

Management is responsible for the preparation of the other information, including the directors' report pursuant to the Guideline for annual reporting 650 'Charity organisations' of the Dutch Accounting Standards Board.

Responsibilities for the financial statements and the audit

Responsibilities of management and the supervisory board for the financial statements

Management is responsible for:
- the preparation and fair presentation of the financial statements in accordance with the Guideline for annual reporting 650 'Charity organisations' of the Dutch Accounting Standards Board; and for
- such internal control as management determines is necessary to enable the preparation of the financial statements that are free from material misstatement, whether due to fraud or error.
As part of the preparation of the financial statements, management is responsible for assessing the Foundation’s ability to continue as a going concern. Based on the financial reporting framework mentioned, management should prepare the financial statements using the going-concern basis of accounting unless management either intends to liquidate the Foundation or to cease operations, or has no realistic alternative but to do so. Management should disclose events and circumstances that may cast significant doubt on the Foundation’s ability to continue as a going concern in the financial statements.

The supervisory board is responsible for overseeing the Foundation’s financial reporting process.

Our responsibilities for the audit of the financial statements

Our responsibility is to plan and perform an audit engagement in a manner that allows us to obtain sufficient and appropriate audit evidence to provide a basis for our opinion. Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error and to issue an auditor’s report that includes our opinion. Reasonable assurance is a high but not absolute level of assurance, which makes it possible that we may not detect all material misstatements. Misstatements may arise due to fraud or error. They are considered to be material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of the financial statements.

Materiality affects the nature, timing and extent of our audit procedures and the evaluation of the effect of identified misstatements on our opinion.

A more detailed description of our responsibilities is set out in the appendix to our report.

Amsterdam, 11 May 2020
PricewaterhouseCoopers Accountants N.V.

Original has been signed by M. van Dijk RA

Appendix to our auditor’s report on the financial statements 2019 of Koninklijke Nederlandse Centrale Vereniging tot Bestrijding der Tuberculose (KNCV)

In addition to what is included in our auditor’s report, we have further set out in this appendix our responsibilities for the audit of the financial statements and explained what an audit involves.

The auditor’s responsibilities for the audit of the financial statements

We have exercised professional judgement and have maintained professional scepticism throughout the audit in accordance with Dutch Standards on Auditing, ethical requirements and independence requirements. Our audit consisted, among other things of the following:

- Identifying and assessing the risks of material misstatement of the financial statements, whether due to fraud or error, designing and performing audit procedures responsive to those risks, and obtaining audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the intentional override of internal control.

- Obtaining an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Foundation’s internal control.

- Evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.

- Concluding on the appropriateness of management’s use of the going-concern basis of accounting, and based on the audit evidence obtained, concluding whether a material uncertainty exists related to events and/or conditions that may cast significant doubt on the Foundation’s ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor’s report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor’s report and are made in the context of our opinion on the financial statements as a whole. However, future events or conditions may cause the Foundation to cease to continue as a going concern.

- Evaluating the overall presentation, structure and content of the financial statements, including the disclosures, and evaluating whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with the supervisory board regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.
In 2019, KNCV was actively involved in:

- Important global WHO forums, such as: STAG-TB (Strategic and Technical Advisory Group); Global Task Force on TB Impact Measurement; Global Task Force on Latent TB Infection; Expert Committee on LTBI; (product profiles); Global Task Force on New TB Drugs and Regimens.

- WHO/TDR Short Generic Protocol for Operational Research, Guidance document on subnational TB incidence estimation (under preparation); Revision of interim guidance on bedaquiline and delamanid for the treatment of MDR-TB (technical resource person to the Guideline Development Group).

- Several regional WHO TB Technical Advisory Groups on TB Control (SEARO; WPRO); WHO- Euro Childhood TB Task Force; Members/Chair of regional GLC’s in SEARO, EURO, WPRO

- Stop TB Partnership’s Coordinating Board;

- Several Stop TB Partnership working groups, sub-working groups and task forces, such as: GLI (Global Laboratory Initiative); GDI (Global Drug resistant TB Initiative); GDI DR-TB Research Task Force; GDI DR STAT Task Force; TB/HIV Co-infection (STBP); TB-Infection Control Working Group; Public Private Mix Working Group; Childhood TB Core Group;

- The Union: Europe Region Executive Committee; TB/ HIV Working Group; TB & Migration Working Group, Ethics Working Group; Nursing and Allied Professionals sub section (secretariat)

- 50th Union World Conference on Lung Health 2019 in Hyderabad; review abstracts and chairing symposia

- Global Fund: Global Fund Board’s Audit and Finance Committee Netherlands Vietnam)

- Global Fund: Global Fund Board’s Audit and Finance Committee; CCAM (Country Coordinating Mechanism) of Kazakhstan; Friends of the Global Fund Europe, Member of the Advisory Committee; in 11 countries KNCV is a member of CCAM-Global Technical Working Groups on TB and TB/HIV

- Alliances, Associations, Coalitions: TB Alliance SHA (Stakeholders Association); TBEC (TB Europe Coalition);

- Research Collaboration: TB Science: RESIST-TB (Research Excellence to Stop TB Resistance) Steering Committee;

- Woltheze: Program Committee: Working Groups (Collaborative TB/HIV activities; New drugs and regimens, Patient-Centered Care);

- Steering Committees, Professional Associations in the Netherlands: CPT (Netherlands Committee for Practical TB Control); GGD (Municipal Public Health Services) Tuberculosis Steering Committee in the Netherlands; VAVN/OZG (Professional Association of Nurses), TB Control Committee; MTF/BeHe (Professional Association of Medical Technical Assistants);

- Board member/or advisor to Foundations, NGOs in the Netherlands: Eijkman Stichting: ‘s-Gravenhage; Stichting tot Steun aan de Bestrijding van Tuberculose; SMT (Stichting Mondiale Tuberculosebestrijding); Stichting Lampion (nationwide information point for care for undocumented immigrants); MCVN (Medical Committee Netherlands Vietnam)

- The Lancet: Commission on Tuberculosis.

- KNCV staff were also on the Editorial Board of:

- IJTLD (International Journal of Tuberculosis and Lung Disease);

- Periodical “Tegen de Tuberculose” (Against Tuberculosis).
